

Cougars:

the ecology of an adaptive carnivore

Aliah Adams Knopff, MSc, Ecology
Senior Wildlife Biologist, Talus Environmental Consulting

Cougars are now in closer, more constant contact with people than ever before, largely due to their ability to adapt to human-dominated landscapes. How can cougars and humans live side by side, and what management actions will best help us co-exist? Join Aliah Adams Knopff as she discusses the results of cougar research conducted in west-central Alberta and the implications of these results for managing cougar-human interactions. Topics will include cougar habitat selection and response to human-caused landscape change, human perceptions of cougars, predation patterns and risk to people and pets - important topics for Yukoners as cougars spread north.

This lecture presented in partnership with WildWise Yukon.

Sunday, March 5, 2017
7:30 pm, Beringia Centre, Whitehorse

Monday, March 6, 2017
7:00 pm, Yukon College, Haines Junction
