

FOOTHILL STREET ELEMENTS

Transit Treatments

Public transit is a critical tool for achieving the Foothill Corridor Goals. A wide range of approaches to providing mobility and access for transit along and across the Foothill Drive corridor are being considered.

Basic transit

- Similar service to today: one local route and two express routes for most of the corridor
- Improvements to bus stop Americans with Disabilities Act access

Enhanced transit

- High frequency (10-to-15-minute) service with added express routes
- Improvements to key destination bus stops, such as seating, shelter, and transit information
- Relocation of bus stops closer to pedestrian crossings

Major transit

- Very high frequency (7.5 minute) service with added local and express service
- Major corridorwide bus stop improvements, potentially center island stops
- Transit intersection treatments such as queue jumps, transit lanes, and/or transit signals
