SPACE OUT YOUR STUDYING
OVER TIME

1. TESTING
2. SPACING
3. SKETCHING

HOW TO DO IT

Start planning early for exams, and set aside a little bit of time every day. Five hours spread out over two weeks is better than the same five hours all at once.

Review information from each class, but not immediately after class.

After you review information from the most recent class, make sure to go back and study important older information to keep it fresh.

PRACTICE BRINGING INFORMATION TO MIND

HOW TO DO IT

Put away your class materials, and write or sketch everything you know. Be as thorough as possible. Then, check your class materials for accuracy and important points you missed.

Take as many practice tests as you can get your hands on. If you don’t have ready-made tests, try making your own and trading with a friend who has done the same.

You can also make flashcards. Just make sure you practice recalling the information on them, and go beyond definitions by thinking of links between ideas.

learningscientists.org
Close your book, and write down as much as you can from memory.

learningscientists.org
Elaboration

Explain and describe ideas with details.

**How to do it**

Ask yourself questions while you are studying about how things work and why, and then find the answers in your class materials and discuss them with your classmates.

As you elaborate, make connections between different ideas to explain how they work together. Take two ideas and think of ways they are similar and different.

Describe how the ideas you are studying apply to your own experiences or memories. As you go through your day, make connections to the ideas you are learning in class.

Interleaving

SWITCH BETWEEN IDEAS
WHILE YOU STUDY

HOW TO DO IT

Switch between ideas
during a study session.
Don’t study one
idea for too long.

Go back over the ideas
again in different
orders to strengthen
your understanding.

Make links between
different ideas as you
switch between them.

SWITCH BETWEEN IDEAS WHILE YOU STUDY

TRY IT NOW

OK, you've read enough about this topic. Why don't you try to answer some questions about a different topic for a bit?

learningscientists.org
Collect examples your teacher has used, and look in your class materials for as many examples as you can find.

Make the link between the idea you are studying and each example, so that you understand how the example applies to the idea.

Share examples with friends, and explain them to each other for added benefits.

Dual Coding

1. Look at your class materials and find visuals. Look over the visuals and compare to the words.
2. Look at visuals, and explain in your own words what they mean.
3. Take information that you are trying to learn, and draw visuals to go along with it.
