In this series, we provide information so students can learn how to study using...

All of these strategies have supporting evidence from cognitive psychology. For each strategy, we explain how to do it, some points to consider, and where to find more information.
LEARN TO STUDY USING...

Spaced Practice
SPACE OUT YOUR PRACTICE OVER TIME

Spaced Practice

1. Testing
2. Sketching
3. Spacing

Concrete Examples
Elaboration
Retrieval Practice
Spacing
Interleaving
Dual Coding
Start planning early for exams, and set aside a little bit of time every day. Five hours spread out over two weeks is better than the same five hours all at once.
Spaced Practice

**HOW TO DO IT**

Review information from each class, but not immediately after class.
After you review information from the most recent class, make sure to go back and study important older information to keep it fresh.
When you sit down to study, make sure you are using effective study strategies rather than just re-reading your class notes.

**Spaced Practice**

1. **Testing**
2. **Spacing**
3. **Sketching**
This may seem difficult and you may forget some information from day to day, but this is actually a good thing! This forces you to retrieve information from memory.
Create small spaces (a few days) and do a little bit over time, so that it adds up!
