

CASE STUDY: **FIXED TO WALL**

Fixed to Wall KwickScreen at HCA The Shard

Image Source Taken during installation of KwickScreen

Application: Brand new hospital in a iconic structure required increased privacy for patients in imaging

Client: HCA The Shard, London - Imaging Department

3 x Fixed to Wall KwickScreens
2 x Portable KwickScreens

Installation: 2 fitters working for 1.5 hours

Benefit: Patient privacy is enhanced for sensitive imaging operations. A fixed to wall solution was needed to avoid existing trunking and provide a tidy solution for the imaging suite.

INSTALL AROUND EXISTING TRUNKING

The KwickScreen can be fixed to the wall allowing it to blend into the environment and removing any trip hazard.

A fixed to wall KwickScreen ensures the KwickScreen is always on hand when needed. The KwickScreen is attached to the wall using supplied brackets ensuring the unit is held firmly in place and can be used easily.

MODERN CLINIC, MODERN DIVIDERS

Although HCA the Shard is a thoroughly modern clinic it still requires space to be flexibly managed. With so much glass and high ceilings, traditional curtain rails were not in keeping with the modern look or provide the standard of privacy required by such a facility.

Carefully placed KwickScreens allow for extra bays to be created and spaces to be separated for different uses.

Did you know?

KwickScreens can be fitted to any wall, by one person in under 10 mins, causing minimal disruption.
