

Position: Laboratory Technician

Do you enjoy a fast-paced, collaborative, cutting-edge working environment?

Get paid for your skill set in the molecular biology of genome engineering! Help Knudra Transgenics adapt its genome editing production to best meet the needs of its clientele. We are looking for collaborative and engaging people to join our team of scientists in Salt Lake City, Utah. Get fast gratification when your work helps scientist from across the world get the transgenics that accelerate their scientific discovery.

Responsibilities:

- PCR
- Restriction enzyme digestion
- Gel electrophoresis
- DNA isolation
- Oligo design
- Sequence interpretation
- Laboratory maintenance (making solutions, ordering supplies, etc)
- Effective communication with teammates
- Other assignments as directed

Requirements

- Bachelor's degree or higher
- Minimum of one year prior laboratory experience
- Good written and interpersonal communication skills
- Ability to multi-task, prioritise, work autonomously and manage time effectively
- Familiarity with cloud-based applications such as Google Docs, Benchling, and Asana.
