

GROUTING INSTRUCTIONS

Before grouting, make sure your product has had at least 24 hours for the tile adhesive/mortar to dry.

- Cover your table with newspaper or plastic.
- Pour a small amount of lukewarm water into grout powder and mix thoroughly with a gloved hand or disposable utensil. Add small amounts of water until it reaches a cookie dough-like consistency. Let sit for about 10 minutes.
- Put on gloves. Scoop out a handful of grout and using circular motions, spread it over the tile. Press the grout into the joints to fill them completely. Continue until the entire mosaic has been covered. You can reuse grout that has fallen onto the paper. You may not use all the grout provided.
- Sweep your hand over the tile in a circular motion to remove excess grout making sure not to drag out grout from between the tiles. You can wipe off individual tiles to make sure they aren't partially covered in grout.
- Once the grout has hardened (about 2 hours), the tiles may be left with a slight haze on them. Clean it by going over the area lightly with a slightly damp cloth, then buff with a dry cloth. The grout takes about 24 hours to set completely.
