

Early Experience with VERA in Lower Joint Replacement Surgery Demonstrates Impressive Results

VERA

Traditional PT

Patient Adherence

Patients using VERA had mean adherence of 77.9%, as measured by the repetitions completed over the course of the episode of care vs. traditional adherence of 42.7%.

26
min/day

Average Exercise Time per Day

Patients using VERA spent on average 26 minutes per day engaged in their exercise program.

Average Completed Exercises per HEP Session

Patients on average completed 12 exercises during their HEP session vs. the traditional 4-5 exercises.

Post Surgical Visits

Patients participated in 5.6 post surgical visits; 2.3 of which were 20 min. synchronous virtual visits and 3.3 were in-person outpatient clinic visits vs. traditional 11.6 outpatient clinic visits.

VERA Total: 3.3 Traditional PT Total: 11.6

Total Rehabilitation Length (days)

Patients completed their rehab in 29.4 days vs. traditional therapy lasting 55 days. This included all virtual visits, post-surgical visits and days spent engaging with their HEP.

YOUR VALUE-BASED REHABILITATION SOLUTION

VERA, is an FDA-cleared rehabilitation platform that utilizes an avatar to demonstrate patient's prescribed physical therapy exercises while the camera detects motion in real time and connects to the clinician interface.

The VERA Clinician Interface

Allows Clinicians To:

-  Administer functional tests, patient reported outcomes (PROs) and monitor adherence
-  Choose from standardized exercise protocols or create custom plans
-  Manage patient population through interactive dashboard
-  Generate reports for EHR uploading

The VERA Patient Interface

Allows Patients To:

-  Stay connected to their care team throughout entire recovery
-  Receive real-time feedback and demonstration of how to perform exercises
-  Stay motivated and engaged in their prescribed therapy
-  Minimize travel time and costs
