

How To Clean Granite Counter Tops

Basic Cleaning:

To keep granite counter tops clean, use a microfiber cloth to dust off the surface. Often a microfiber cleaning cloth, even a dry one, is all that is needed for basic cleaning.

For times when spills or daily life happen, try to wipe down the granite counter top daily or as needed using only water. Once a week wipe your granite counter tops down with a damp cloth and a stone cleaner formulate with a neutral pH. Never use harsh chemicals or abrasive cleaners on your counter tops, even if you think the stain or mess needs it. These types of cleaners can scratch, pit and etch the surface of the stone permanently.
