# RUBBER SURFACING

## Recycled Rubber Product Line

### PRODUCT HIGHLIGHTS

- Rubber surfacing will help save the planet by turning scrap tires into great spaces, it will save you from injuries due to falls or broken glasses while pool-side, and it will ultimately help save you money.
- Rubber surfacing is typically installed over sub-surfaces such as concrete, asphalt, paving stones, or compacted granular.
- Made from recycled rubber granules and a high grade poly resin binder, the materials hold up well in extreme climatic conditions.

### FEATURES

#### Key benefits of the recycled rubber surfacing product

- Durable and seamless surface.
- Affordable option to concrete or asphalt.
- Crack resistant and flexible to withstand minor ground movement.
- Impervious to salt/de-icer solutions.
- 5 year warranty.
- Easy snow removal.

### SPECIFICATIONS

#### Recycled rubber surfacing options available in varying colours

- Our surfaces are safe, accessible, easy to clean, and offer a wide range of colour options and design possibilities.
- The thickness of Playground Pour-in-Place surfacing can vary between 1" to 6" thick.
- Splash parks, driveways and walkways are usually around 1" thick.
- Each installation is customized to ensure all safety and performance requirements are met and exceeded.
