POSTERIOR, SINGLE UNITS
UP TO A 3 UNIT BRIDGE ONLY

When strength can't be compromised, ZEUS Zirconia Restorations offer many benefits over PFM & Full Metal.

ADVANTAGES

- METAL FREE BIOCOMPATIBILITY
- EXCEPTIONAL STRENGTH
- LIFE-LIKE ANATOMY
- CONSERVATIVE PREP OPTIONS
- PREDICTABLE PRICE
- MADE IN THE USA

ZEUS Full Contour Zirconia Crowns, Bridges and Implant Restorations are a new treatment option for clinical situations where strength is required. Made of high-performance zirconia, ZEUS Restorations offer esthetic advantages over Full-Metal Restorations and are more resilient to fracture

or delamination than PFM Restorations. Metal-free ZEUS Restorations are highly biocompatible and are not affected by fluctuations in alloy prices. Available in three tiers of products, ZEUS Restorations provide the flexibility to treat a wide range of patients with an optimal restoration solution.

ZEUS™. A STRONG ALTERNATIVE TO PFM & FULL METAL

PREPARATION GUIDELINES

FEATURES AND BENEFITS

Providing an esthetic alternative to gold and PFM restorations (metal ceramics) – ZEUS crowns are the restoration of choice for patients.

With 1400 MPA of flexural strength, ZEUS crowns offer greater strength and chip resistance than metal ceramic restorations, making them an excellent choice for parafunctional patients, including bruxers and grinders.

ZEUS crowns are manufactured by our experienced designers using top-of-the-line five-axis milling machines for ultra-precise margins and improved esthetics over full metal restorations.

Stronger than metal ceramic or traditional all ceramic restorations, ZEUS crowns allow for a more conservative preparation.

ZEUS crowns can be seated with conventional cement.

ZEUS crowns are made of Zirconium Oxide (ZrO₂), a highly biocompatible and hypoallergenic material that has been used in a variety of medical and dental applications. As an added benefit, some studies have shown that Zirconia may cause less wear to opposing dentition than porcelain restorations¹.

¹The Journal of Advanced Prosthodontics 2010;2:111-5. A study on the in-vitro wear of the natural tooth structure by opposing zirconia or dental porcelain.
