Our philosophy

Innovator Health is guided by a physician CEO who recognizes that healthcare is about relationships and not about technology. Our goal is to deliver telemedicine experiences that are so rich and natural that neither the patient nor their caregiver ever sees the distance that separates them. The Innovator Health team is driven by the goal of expanding access to care for millions of patients that are under-served today.

Innovator Health does not believe the telemedicine encounter has to be second best to an in person visit. Through our patented designs and simple to use Platform, we know that both patients and their caregivers will actively pursue care via the Innovator Health technologies.

Darren J. Sommer DO, MBA, MPH

Founder and CEO

As both a practitioner of telemedicine and a technology executive, Dr. Sommer understands the importance of creating telemedicine systems that exceed expectations. With a focus on reliability and simplicity, Dr. Sommer's vision is to deploy Innovator Health technologies so that all American's have access to the highest level of care.

Dr. Sommer received his Doctor of Osteopathic degree and holds a Master's in Public Health from Nova

Southeastern University's College of Osteopathic Medicine. Dr. Sommer also has more than 20 years of military service and two combat deployments in support of the Global War on Terrorism. It was his work in these austere environments that generated his passion for telemedicine. Dr. Sommer went on to earn his Master's in Business Administration from Duke's Fuqua School of Business and he is a Health Policy Fellow of the American Osteopathic Association.

Lifelike experience

Our innovative display allows the clinician to appear life-sized, in 3D, and with natural eye contact—the most realistic and personal video experience of any telemedicine technology on the market today.

Effortless setup

The Rounder is lightweight and easy to move, and setup couldn't be simpler: the system is launched and fully operational with the click of a single power button.

Bandwidth efficiency Complete security

A revolutionary video codec uses only a third of the bandwidth needed by other telemedicine solutions, allowing the system to run smoothly over 4G when an ethernet connection is unavailable.

The software operates on a HIPAA compliant 128bit encrypted platform, similar to your online banking; sensitive conversations are always secure and confidential.

Seamless operation

Thanks to an integrated power backup system, the Rounder can be moved without powering down, and will even remain operational during a power-outage.

Antimicrobial coating

The Rounder utilizes an antimicrobial surface coating which combats infections by continuously inhibiting the growth of bacteria, mildew, and fungi.

The Rounder

The Rounder is a major departure from the small, impersonal cart-based solutions on the market today. With a 55" HD display and direct eye contact with your patients, the Rounder delivers an experience that is unparalleled.

The Rounder has an incorporated nurses workstation that will secure a laptop computer in place. This ensures you can leverage your own

EHR without the security or data integration worries of a third party solution. The Rounder also comes standard with a second retractable 27-inch monitor and video system that can be used for collaboration, education or an additional video call.

The Studio

The Studio is the interface for communicating through the Rounder. Its unique and simple-to-use design delivers natural eye contact and engaging conversation with exceptional sound and image quality. One Studio can access multiple Rounders based on how you choose to configure your network.

Thanks to a hidden camera and a patented mounting system, the clinician is able to view the 24" LED LCD

monitor while simultaneously looking directly into the lens of the camera. Integrated lighting and a directional microphone give you complete control over the video experience – a crucial component of delivering the most engaging and lifelike encounters to your patients. The Studio can be used from both sitting and standing positions, and is adjustable to ensure that clinical staff of all sizes are seen without compromise.
