NVENTUS

Paleoplacer Gold in Ontario February 2019

inventusmining.com

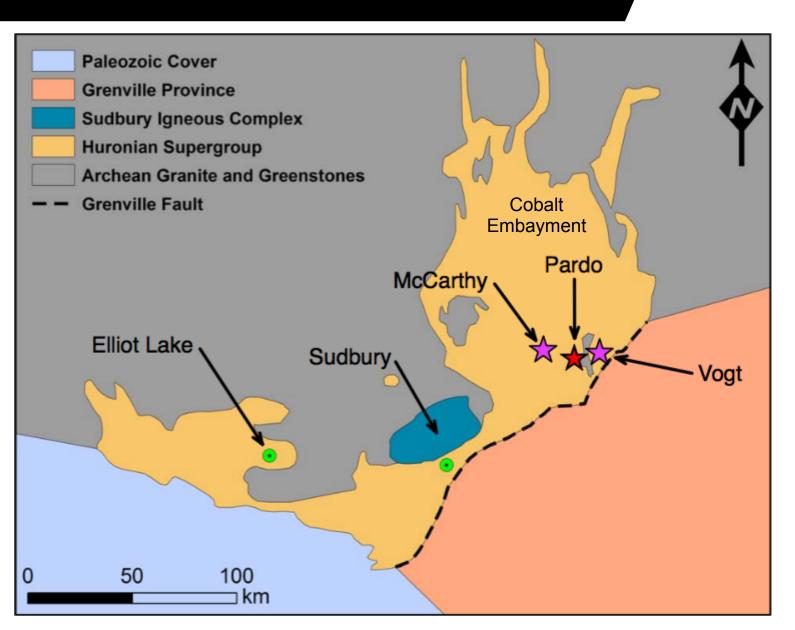

Located 65 km northeast of **Sudbury**, **Ontario**, or 200 km South of **Timmins 100% ownership** in 190 square km property

Gold occurs in flat lying **conglomerate "reefs"** similar to **Witwatersrand** Typical gold bearing reefs are **1 to 3 m in thickness** at a depth of 0 to 40 m Drilling has shown that reefs are laterally continuous over an **extensive area Boulder conglomerates** of Mississagi formation contain the highest gold grades Surface channel sampling returned high grades and widths, highlights include:

007 Zone36.5 g/t gold over 31 mEastern Reef4.2 g/t gold over 92.5 mGodzilla Zone5.2 g/t gold over 140 m

Regional Geology

Regional Geology of the Huronian Supergroup

3

16,000 km² Sedimentary Rift Basin

Host to Elliot Lake Uranium Paleoplacers

Deposited between 2.2 and 2.4 Ga

Local Geology at Pardo

Mississagi and Matinenda formation are fluvial sandstones and conglomerate

INVENTUS

Boulder Conglomerate

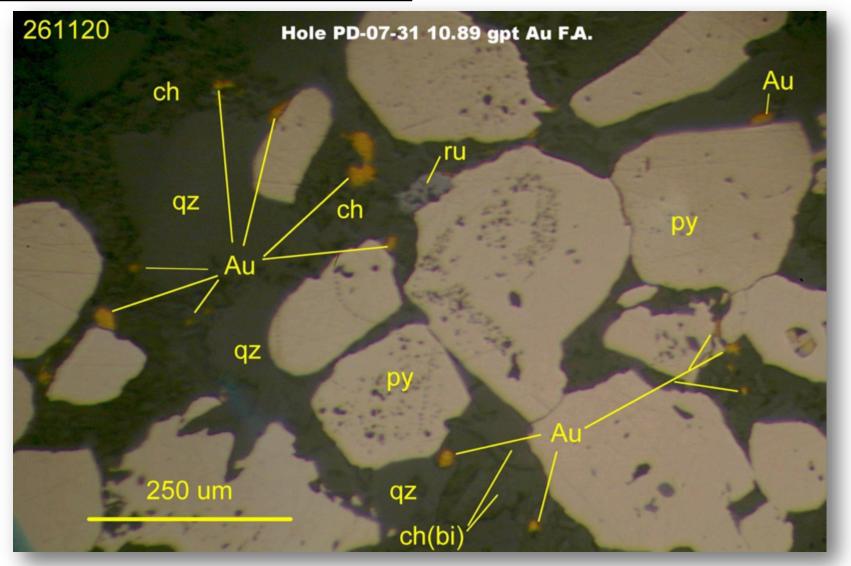

Godzilla Zone Outcrop: 140 m at 5.2 g/t gold

Similar to Witwatersrand

Pyrite - Gold Association

Au = gold Py = pyrite qz = quartz ru = rutile ch = chlorite ch(bi) = chlorite-biotite

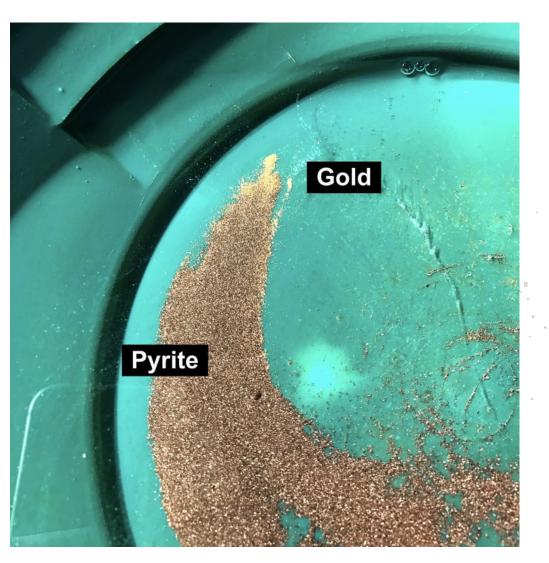

Gold Cluster in 2017 Drill Core

Gravity Recoverable Gold

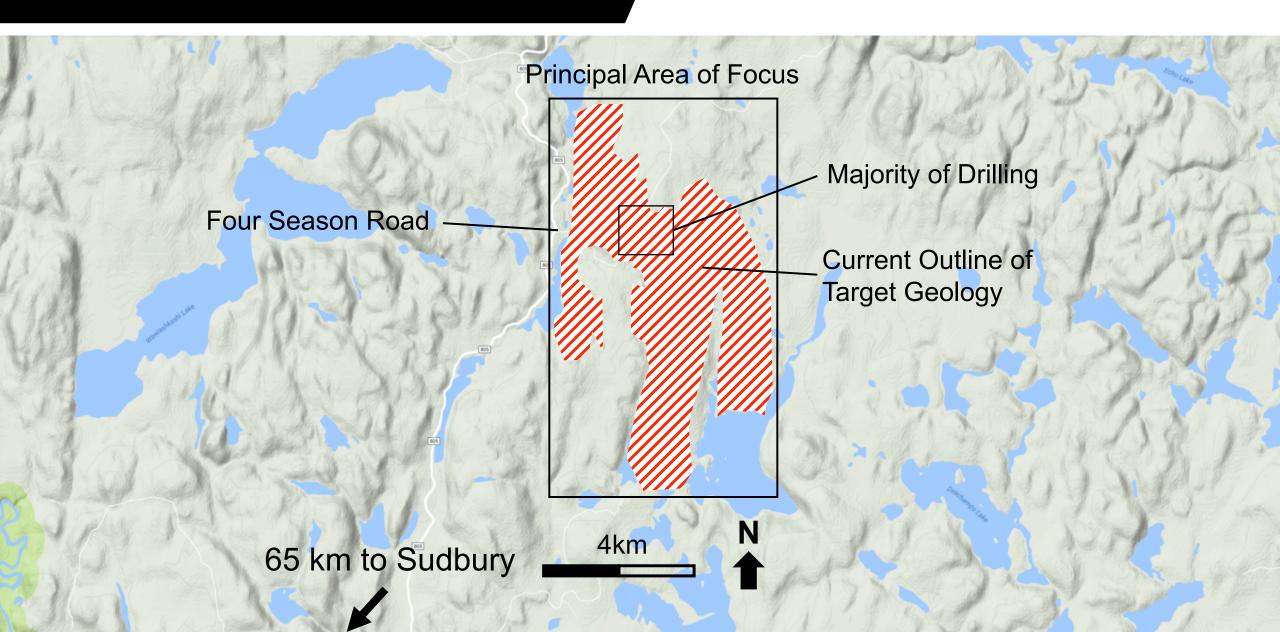

1,024 mg of fine gold panned from the tip of a gravity concentrate made from 110 kg sample of Pardo 007 Zone

Known Target Size

Grade x Thickness

X-Section View

Sampling Challenges

Gold unevenly distributed in the matrix

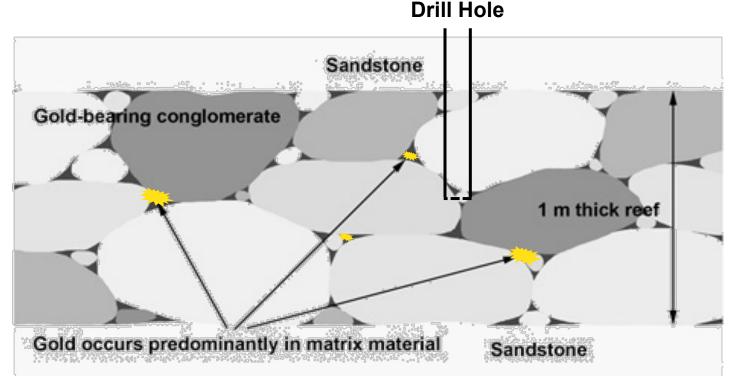

Matrix accounts for 10 – 40% by volume

Grade determination is not unusual challenge for paleoplacers

Core drilling very good for determining **thickness** of gold bearing reefs, but only an **indication** of grade.

Necessitates bulk sampling methods

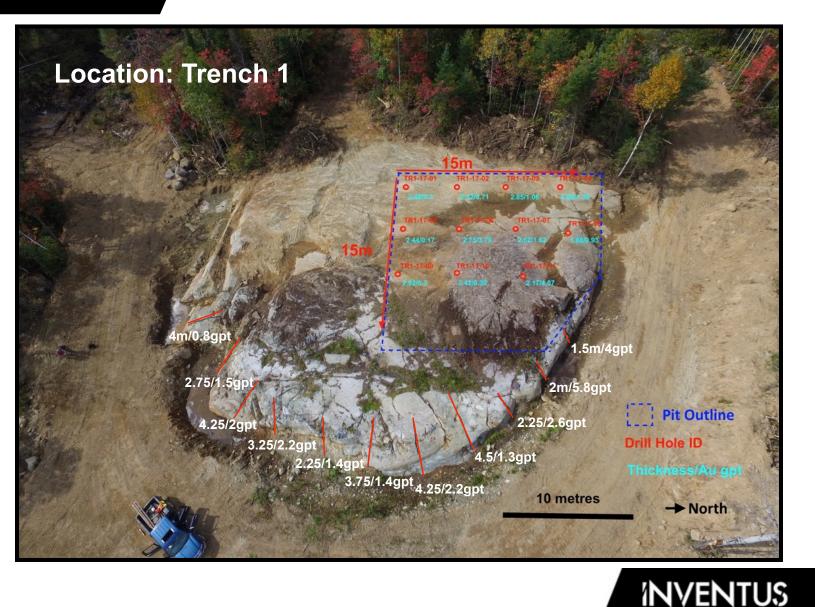

Ore sorting possible to up grade

2017 Bulk Sample Summary

- 1,000 t Bulk Sample
- Completed Oct to Dec 2017
- Processed at McEwen Mining Black Fox Mill near Timmins
- Results released Jan 3, 2018
- Head Grade 4.2 g/t gold
- 89% Metallurgical Recovery
- Avg. Au Grade of 11 DDH 1.34 g/t
- Very Significant Results

2017 Bulk Sample Photos

2017 Bulk Sample Details

Actual Weight Mined 1,018 tonnes

Calculated Dry Weight Mined 985 tonnes

Au Recovered 3.72 kg / 119.5 oz

Au in Tailings 0.44 kg / 14.2 oz

Au Recovery % 89 %

Au Total Contained 4.16 kg / 133.7 oz

Calculated Au Head Grade 4.2 g/t

Pardo Project Milestones

Objectives in 2017:

- 1. Complete drilling and modeling on initial 330,000 m² area containing approx. 1.7 million t
- 2. Raise funds for bulk sampling and exploration
- 3. Prove high-grade, mineable, flat lying layer with 1,000 t bulk sample at Trench 1

Objectives for 2018:

- 4. Publish new NI 43-101 Technical Report with size and grade ranges
- 5. 10-50 kt bulk sample (Zones 007, Trench 1, Eastern Reef)
- 6. Demonstrate ore sorting technology works

Closure Plan Submitted for 50,000 t Sample

Targeting Spring 2019 start, 10,000 tonnes sent to Black Fox Mill, Timmins. First Target Area for Bulk Sampling – 007 Zone

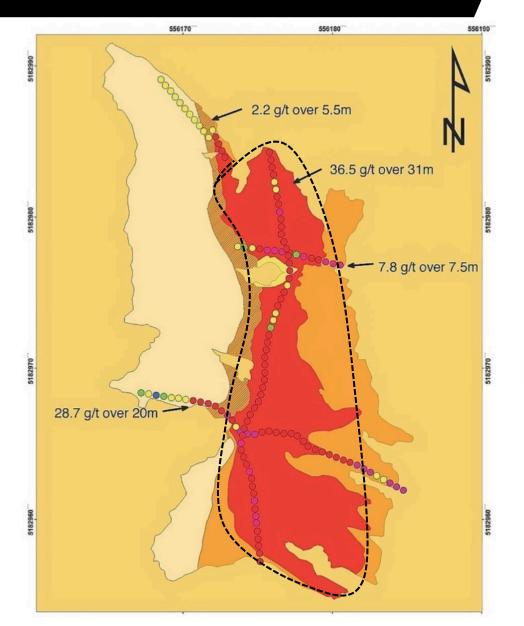

007 Mineralization exposed on surface, minimal waste mining.

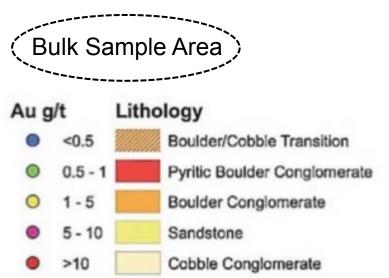

Impressive high grades in channel sampling:

36.5 g/t gold over 31.0 m 7.8 g/t gold over 7.5 m 28.7 g/t gold over 20.0 m

007 Zone Bulk Sampling

INVENTUS

Exploration Target Size

What does it mean?

- 1. Estimates tonnage potential based on existing drilling using probabilistic approach.
- 2. Estimates grade potential based on bulk sampling, trenching and drilling.
- 3. <u>Not</u> a resource estimate.

21

NI 43-101 Aug 2018

Exploration Target Size

Parameter	P10	P50	P90
Tonnage (t)	450,000	8,600,000	12,500,000
Gold Grade (g/t)	4.20	3.50	3.50
Metal Content (oz)	60,000	950,000	1,400,000

Modeled boundary covers about 5% of the Pardo Property.

P10 – Pessimistic case. Assumes mineralization restricted to outcropping areas.

- P50 Moderate case. Assumes 50% continuity of mineralization within modeled boundary.
- P90 Optimistic case. Assumes mineralization is continuous and extends to modeled boundary.

Pardo Advantage

Sortable Ore ✓ Low risk ✓ Profitable ✓ Quick Development ✓
