

# THE KNOW YOUR WATER® Program

An Operation Unite® Outreach

**Nobody wants to experience a dry well.** The **KNOW YOUR WATER®** program makes your groundwater needs manageable.

Building a citizen response to a sometimes limited resource, like water, requires an expanded understanding of its presence and function in our lives. This is why our first step is to provide you with information describing your water supply. Once recognized, adaptive capacity, resourcefulness and willingness to work with our neighbors becomes the necessary component that transforms limitation into accommodation and satisfaction in your life and community.

Operation Unite® wants to help. We have created several programs that are designed to build your capacity in handling a more varied and changing presence of water in your life. The **KNOW YOUR WATER®** program informs and teaches you very important aspects of your water supply. The **Neighborhood Water Alliance** is another program that brings neighbors together to create a water contingency plan for the neighborhood.

These programs are special because you build them to accomplish what you want to achieve; a healthy water supply. The most basic level of the **KNOW YOUR WATER** program simply provides observation of groundwater depths in your well through time. This information is interpreted and presented to you as a concise reporting of groundwater conditions and life-style stresses. You use it to decide on your water demand options. We even provide a one-hour consultation to help you decide on a plan of action for the next water year. This is where your adaptive skills come into play.

The **KNOW YOUR WATER®** program can be expanded based on your level of interest and these expanded parts can be changed each year.

- Wellhead Survey
- Water Quality Testing
- Rainwater Harvest Potential
- Groundwater Recharge Potential
- Life-style Well Test
- Neighborhood Survey

So, join the Operation Unite® **KNOW YOUR WATER®** and **Neighborhood Water Alliance** programs and make your life's groundwater needs manageable today and into the future. We give you the information you need and teach you how to use it. You make all the decisions.
