**MINING EXPLORATION ENTITY QUARTERLY REPORT  
FOR THE THREE MONTHS ENDED  
31 MARCH 2006**

**REVIEW OF OPERATIONS**

**PHILIPPINES OPERATIONS**

The drilling of the Nuevo Malolos 1 well, which commenced on December 27<sup>th</sup> 2005, reached total depth of 6,281 ft (1,945 metres) on 31<sup>st</sup> January 2006 and was suspended for further testing as a potential production well.

Good oil and gas shows were encountered over an interval of 3,891 ft (1,213 metres) from a depth of 2,400 ft (732 metres), with net (sandstone) reservoir over the interval estimated at up to 764 ft (233 metres). Difficult drilling conditions associated with fault/fracture systems penetrated in the well, and unstable shale intervals interposed between five major interbedded sand packages, prevented the implementation of a comprehensive test program on the well, and resulted in costs in excess of pre-drill estimates. However the well was secured for future testing by setting casing to total depth, cemented over all but a washed out zone around 2700 ft and an underlying sand sequence where a core (2750-2780 ft) exhibiting excellent porosity (23-27%) and permeability (100-400 millidarcies) was recovered during drilling.

An open-hole drillstem test of the cored interval exhibited a strong pressure build up to almost 1000 psi, suggestive of a gas flow, before the tool plugged and the test was aborted. In addition, a test through casing at 6,233-6,243 feet did recover a small amount of oil, with evidence of formation damage.

Detailed analysis of the core cut between 2750-2780 ft did, however, confirm the presence of both light, immature oil, and gas, as well as the exceptional reservoir qualities. This interval was perforated and tubing with sliding sleeve run before rig release, but not able to be tested with the limitations of equipment on site.

Approval has been received from the Philippines DOE and equipment and personnel are being mobilized to the site to conduct a flow-back test on the perforated interval in mid May. In the event of a successful flow back, additional equipment will be sourced to enable a long-term test of this interval.

A successful flow-back and test will have significant implications for the testing of other zones in the well interpreted to be hydrocarbon bearing, and for the entire Malolos anticline and the numerous other leads and prospects in the licence area.

**NEW VENTURES**

During the quarter the Company, together with joint venture partner Gippsland Offshore Petroleum Limited, lodged an application for an exploration licence over an area in a known gas province in western Europe. Although the application has been acknowledged and registered, details will remain in commercial confidence until any competing applications are resolved.

**CORPORATE**

Following the successful completion of the initial drilling program at Malolos completed, Mrs Gundi Royle stepped down as Managing Director of the Company to return to the United Kingdom, where she continues as a director with responsibility for new opportunities. Dr David King, previously a non-executive director, assumed responsibilities for local management and on-going operations in the Philippines.

During the Quarter the Company changed its Registered Office to:-  
c/- Mitchell and Partners  
Level 7, 10 Barrack Street  
Sydney NSW 2000  
Tel: (02) 9392 8686

The principal place of business remains at:-
