

Megalearn Releases Finding Stubby

Malmö, September 24, 2016—Megalearn AB, a Swedish studio making educational apps, has released *Finding Stubby* for iPad, iPhone and iPod touch.

In *Finding Stubby*, kids explore the ocean by taking control of an ROV (Remotely Operated Vessel). While under water, they meet animals such as the sperm whale, tuna, and of course, the stubby squid. For each animal there's a uniquely designed quiz.

The ROV has the ability to pick up items. This allows kids to conduct exciting experiments. Example: what happens if you try feeding a plastic bottle to the sperm whale? Or give a shrimp to the stubby squid?

Like all apps from Megalearn, *Finding Stubby* features amazing artwork and sound.

Megalearn's CEO and Co-Founder, Per Thulin says:

"Much of the ocean is still undiscovered, and it's exciting to think about what's hiding down there. We hope that Finding Stubby will introduce this mysterious world to kids, and perhaps inspire them to become our future marine biologists."

Finding Stubby is available for **free** on the App Store.

ABOUT MEGALEARN

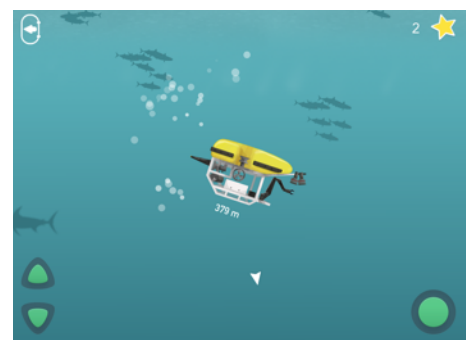

Megalearn is a Swedish startup making educational apps with gorgeous artwork.

Megalearn was founded in 2016 by Per Thulin and Joy Leelawat.
