CORI²
CLINICAL OUTCOMES REPORTING INFORMATICS

CORI² OVERVIEW

CORI² is a comprehensive quality system designed specifically for use in endoscopy. Garnering insight from users in research hospitals, universities, veteran's hospitals (VAs) and private practices since 1995, CORI² leverages over two decades of hands-on experience to bring users a feature-rich solution to their quality management needs.

VALUE PROPOSITION

- Benefits physicians, providers, patients and individual practices by reducing endoscopy medical practice costs, improving productivity and maximizing reimbursement

- Ensures continuous quality improvement to advance patient care and safety

- Creates endoscopic reports within minutes including personalized procedural notes

- Promotes interoperability within medical centers and clinics through communication and data exchange

- Customizes queries which provide necessary data for individual practices and departments

- Implements strict security measures using 256-bit RSA public/private key pair

CUSTOMIZED REPORTS FOR

ERCP	Colonoscopy
Capsule Endoscopy	EGD
Motility Studies	Flexible Sigmoidoscopy
Bronchoscopy	Endoscopic Ultrasound

CURRENT ADOPTION

CORI² is implemented in over 65 medical centers, universities, veteran's hospitals and private practices.

PRODUCT BENEFITS

Image Capture
- Imports high resolution images from current image management systems
- Attaches endoscopic images seamlessly to detailed reports

Scheduling
- Tracks practice activities including scheduled appointments, no shows, signature approval and other uses as determined by the site
- Manages patient and room scheduling with color-coded activities

Procedure Tracking
- Records critical procedure data and associated CPT and ICD-10 codes by working through a series of intuitive screens
- Generates patient instructions important for successful post-procedure outcomes
- Provides a quality measures program with benchmarking against national practice trends

Queries & Reports
- Creates a detailed report that includes images imported from endoscopic systems
- Provides an expedited report that can be automatically faxed to the referring provider's office

Interoperability
- Uses HL7 and DICOM protocols
- Communicates to EMRs securely and bi-directionally
