

LED JOBSITE is the complete solution for outfitting entire jobsites with energy efficient temporary LED lighting that you can reuse again and again, not just on one project. Lind Equipment has developed a complete suite of portable LED lights that will replace all traditional bulb-based lighting on long-term construction sites. **The energy savings are so substantial that an LED Jobsite will pay for itself in reduced energy costs alone**, and will also dramatically reduce downtime, site injuries, and maintenance costs.

LED JOBSITE CLASSIC is the standard way you would think about buying temporary lighting. You buy the lights, they are delivered to your site, and they are yours to keep and use again and again. Ideal for construction sites, LED JOBSITE lighting is durable, rugged, easily transportable while providing the lighting power you need - instantly, everytime. Backed by Lind's expertise and comprehensive warranty, you can work confidently, knowing that your lighting equipment will provide years of service.

The **LED JOBSITE CLASSIC** option is the popular choice for customers who own their own assets and reuse equipment from job to job. Do you subcontract jobs and dispose of your temporary lighting equipment after each project? Ask us about **LED JOBSITE ON DEMAND**.
