

LED JOBSITE is the complete solution for outfitting entire jobsites with energy efficient temporary LED lighting. Lind Equipment has developed a complete suite of portable LED lights that will replace all traditional bulb-based lighting on long-term construction sites. **The energy savings are so substantial that an LED Jobsite will pay for itself in reduced energy costs alone**, and will also dramatically reduce downtime, site injuries, and maintenance costs.

LED JOBSITE ON DEMAND takes all the benefits of an LED JOBSITE & delivers the complete solution as a service. Lind Equipment provides the jobsite with usable "light", rather than just the "lights." The burden of equipment ownership is completely lifted off the customer who benefits from the performance of the lights, rather than the ownership of temporary lighting equipment. For the duration of the project, the lights are owned and managed by Lind. Lights are delivered to your site when you need them, and when you are done, you put them back in their containers and send them back to us. Lind warrants that the equipment will last the duration of the job without defect, and will replace any defective lights immediately so that you continually have lighting uptime. Simple.

This option is the popular choice for customers who typically sub-contract out the lighting of a construction project and realize no benefit from keeping used lighting equipment upon project completion.

ON DEMAND BENEFITS

- No capital investment required
- No maintenance or repair hassles
- Guaranteed uptime
- Promotes lean construction principles
- No obligation for disposal or inventory control upon project completion

LED JOBSITE BENEFITS

- Lower total cost of ownership
- Reduce costs
- Increase productivity
- Safer work environment
- Greener footprint & LEED credit

The solution is here and the benefits are clear.

LED JOBSITE ON DEMAND pays for itself. The fee is a portion of your energy savings.

How can you get free lighting on your next project?
