

AEG Washington: 21Q2 Stakeholder Challenge: Buildings & Construction

April 7, 2021

Keith A. Anderson, Director of the DC Department of General Services (DGS)

DGS Sustainability Goals: Sustainable DC 2.0 Plan

ENERGY SAVINGS AGREEMENT

Whereby a vendor will identify and implement a full range of energy and water savings measures at more than 20 DC Government facilities. This type of partnership will allow DGS to leverage and expand best practices across building management, operations, and sustainability with minimal to no upfront capital costs

RETRO-COMMISSIONING I RETROFIT CONTRACT VEHICLES & PROJECTS

The District is working hard to ensure technology and data are at the forefront of our operations by building into our retro-commissioning efforts the idea of automated commissioning. Once the retro-commissioning and retrofit process is finalized, automated constant commissioning facilitates the implementation of findings, promotes knowledge exchange, and builds in-house skills that allow the District to better maintain system performance over time.

DGS Sustainability Goals: Clean Energy Act

Building Energy Performance Standards (BEPS)

- At DGS we are heavily focused on the Act’s Building Energy Performance Standards (BEPS) and subsequently the development of our Strategic Energy Management Plan (SEMP)
- BEPS establishes, over multiple compliance periods, minimum energy performance thresholds for all DC government buildings 10,000 sq. ft. and greater
- The SEMP will serve as a roadmap for DGS to comply with BEPS and reach the law’s aggressive energy efficiency goals
