

Envirocann Outdoor Pre-Certification Checklist

Cannabis

- Make sure all cannabis, materials, amendments, soil, waste, and fuel are securely stored.
- Is your parcel in the allowed land use zone for cannabis cultivation in your county?
- Do you have a soil management plan in place? It is best to compost on-site materials and build soil from locally available inputs. Living soils retain water, and grow stronger, healthier plants.
- Is your cannabis cultivation licensed by your local municipality? If not applicable, are you in compliance with local regulations and in good standing with the local jurisdiction?
- If you discharge wastewater into a municipal wastewater treatment, can you prove that your effluent discharge is within the acceptable limits required by the wastewater treatment facility?
- If you are using supplemental lighting, or cultivating indoors, can you provide a current inspection report by a licensed electrician confirming your electrical system is up to code?

Materials

- Do you have an Integrated Pest Management (IPM) plan?
- Are you using allowed materials for pest management?

Roads

- Are your roads functional and properly maintained? Identify and fix any erosion and potential for sediment discharge associated with your road system.
- Has Cal-Fire inspected your property? Emergency infrastructure and adequate vertical and horizontal clearance are required for roads, as well as turnouts, and turnarounds. Roads must be accessible for firefighting equipment and vehicles in emergencies.

Grading/Earthwork

- Are you in compliance with the local grading ordinance? Flat areas (with natural slopes less than 10%) are generally the best areas to develop or farm.

Water Source

- Are your water source(s) legal, permitted, and appropriately developed?
- Do you have adequate water storage to supply for all your water needs (domestic + irrigation)?
- Do you utilize rainwater catchment for irrigation purposes? Catching rainwater is free, and it is yours, to use as you see fit.

Riparian Setbacks

- Make sure your cultivated areas / gardens are at least 100' from the nearest watercourse and the riparian corridor, preferably further. If you are in doubt of your proximity, consult a professional. In addition to cultivation, don't do any logging, earth work, ground disturbance, etc. in the riparian corridor.

Envirocann Indoor Pre-Certification Checklist

Cannabis

- Are all cannabis, materials, amendments, soil, waste, and fuel securely stored?
- Is your parcel/building in the allowed land use zone for indoor cultivation in your county?
- Is your cannabis cultivation licensed? Are you in compliance with local regulations?

Materials

- Do you have an Integrated Pest Management (IPM) plan?
- Are you using allowed materials for pest control?

Discharge / Wastewater

- If you discharge wastewater into municipal wastewater treatment, can you prove that your effluent discharge is within the acceptable limits required by the treatment facility?
- If you are cultivating with hydroponic methods, do you have onsite water treatment that removes agricultural by-products from the wastewater prior to discharge?

Electrical System

- Was your electrical system installed by a licensed electrician?
- Can you provide documentation confirming that your electrical system is safe and up to code?

Safety & Security

- Does your facility meet the required standards for safe access, storage, and security?
- Do you have adequate measures in place to meet nuisance laws regarding odor, light and traffic?
- Do you have adequate sanitary facilities in place to accommodate employees' needs?
