

## **Envirocann Pre-Certification Checklist (Indoor & Outdoor)**

### **Land Requirements**

- Are you growing in the ground or in containers? If containers move to the next section.
- Have you managed the site where you are growing for the last three years?
- If you have not managed the land for the last three years do you have knowledge of, or access to, information regarding the materials that were used at the site over the last three years?

### **Seeds and Planting Stock**

- Are you growing your crop from seed? Is the seed treated?
- Are you growing your crop from clones? Are the mothers and/or clones managed organically?
- Is your planting stock sourced from another producer? Is it managed organically?

### **Soil Fertility & Crop Rotation**

- Are your cultivation practices maintaining or improving the physical, chemical and biological condition of the soil and minimizing erosion?
- Are you managing crop nutrients and soil fertility through rotating crops, cover cropping and the application of plant and animal materials?

### **Crop pest, weed and disease management**

- Are you using sanitation measures to remove disease vectors and habitats for pests?
- Are you using mechanical or physical measures to control pest pressures?
- Are you using preventative measures to combat pests, weed and diseases prior to using biological, botanical, or synthetic substances?

### **Materials**

- Are you using allowed products for fertility and pest control? See OMRI, CDFA & WSDA lists.
- Do you have an Integrated Pest Management (IPM) plan?
- All materials MUST be approved for use prior to using them on certified crops.

### **Record-keeping**

- Are you maintaining records concerning the production, harvest, handling, labeling and sales of your crop?
- Are you keeping records for a minimum of five years?
- Are you willing and able to provide Envirocann with access to all records?

**Please contact us directly with any questions you may have regarding certification.**
