

Madison Middle was one of seven Metro schools selected to participate in a federally funded grant to provide STEM educational experiences after hours.

These schools feed into high schools that have STEM pathways. Through this endeavor, the students attend sessions that are academically enriched in science, technology, engineering and mathematics (STEM).

Mr. Stephen Buttrey and Ms. Leah Walker were selected as Lead Teachers to implement this program which was developed by the Boston Museum of Science.

The classes meet each Monday and Wednesday from 4:00-6:00 and transportation is provided. Students are also invited to attend a session one Saturday each month at Hunter's Lane High School.
