**Dean of Instruction:** Dr. Yolanda Porter

## ABOUT OUR SCHOOL

Stratford STEM School, Lower Campus prepares students to be high achieving, socially aware, scientifically and technologically literate, respectful and responsible citizens, and leaders in a global community.

The rigorous STEM-based focus is for students interested in exploring a curriculum enriched with a design process approach. Our STEM scholars partner with the top scientists, engineers, mathematicians and researchers in our region and utilize the most current technologies. Whether it's the science of cooking or robotics, students have the chance to explore and learn in depth. STEM also helps them learn to think in unconventional ways to solve problems. The skills we teach prepare them for success in a number of different careers, and help them see and understand how subjects work together to help solve problem. Stratford STEM also offers arts programs, blended learning opportunities and Encore for its gifted and talented students.
