Dansk Træmel expands

With the opening of our new factory in Lunderskov near Kolding, Denmark, we've more than doubled our capacity. Our facility in Esbjerg has been finding it more and more of a challenge to keep pace with the growing demand for high-quality sawdust. Demand has really taken off over the past few years, with Copenhagen Fur placing great emphasis on the quality of the sawdust and its significance for the end product. We are now once again in a position to accommodate the demand and the influx of new customers.

The broadest range on the market coupled with great flexibility

- 15 or 22 kg sacks – paper or plastic
- Number of sacks per pallet to order
- Big bags with weight to order
- Unpackaged product delivered by dumper truck, vacuum pump truck or walking floor truck
- Delivery or collection from Esbjerg or Lunderskov
- Wide range of special mixes to order – so you can be sure of precisely the mix that best matches your pelting plant.

Freshly produced, high-quality sawdust delivered to you – when you need it!

Dansk Træmel

Earn EUR 4.03 more per sack of sawdust

- ◆ 100% pure, freshly cut beech wood
- ◆ Optimal absorption and cleaning properties
- ◆ Heat treated
- ◆ Low water content
- ◆ 80 l per sack
- ◆ Healthier working environment – fewer sick days

There are big differences in sawdust – up to EUR 4.03 in the sales price per sack.

According to Copenhagen Fur, the quality of the sawdust used in the pelting process can make a difference of up to three quality points. At February 2016 prices, three quality points is equivalent to EUR 0.09 per skin. If it takes a sack of sawdust to process 50 skins, the improved sales price for the skins will correspond to additional earnings of around EUR 4.03 per sack.

Completely newly cut beech wood

HG supplies a very light sawdust product that is particularly suitable for light mink. It comprises 100% pure, raw and fresh beech wood, because it takes no more than four hours from the time the trunks are cut to the point where the sawdust is dried at a hi-tech drying/heat-treatment facility. This explains why the product is so light and pure.

Improved absorption and cleaning properties

It is important that sawdust can clean and absorb quickly. This is precisely what Dansk Træmel sawdust does because it has a broad, rough surface. In addition, the sawdust contains only 8% water. Compared with a water content of, for example, 10%, this means that you quite simply get more sawdust for your money.

A healthier working environment

Sawdust from Dansk Træmel has a very low content of germ, yeast and mould fungi, which can be hazardous to health. This benefits your workforce – and means fewer sick days at the pelting centre.

Big Bags

HG also delivers in Big Bags (= 36 x 80 litre sacks). The price per litre is the same, whatever the size of the sack.

Please order in due time to avoid the rise in price of approx. EUR 0.34 per sack each quarter.

Long-term storage-safe skins

For the skins to maintain their value for more than a month, we recommend that you use long inner sleeves and process the skins on the leather side for 7–10 minutes in sawdust, and for approx. 2–4 minutes in the net drum.

Leather-side treatment

Earn EUR 0.60 more per skin

The skin with the dark leather side (left) has been treated in a throughput drum. The light skin (right) has been treated in both a throughput drum and a self-emptying skin drum. This will remove the greasy sawdust from the skins, and the risk of a film of fat developing on the hair side is significantly reduced.

Trials conducted by Copenhagen Fur indicate that this treatment can generate an additional EUR 0.60 per skin.
