

NATIVE VEGETATION BENEFICIAL INSECTARIUM FARM WALK

What does the insectarium look like 6 months after planting and what have we learnt from the spring/summer IPM monitoring?

In September 2016, we ran some workshops to provide the research. Six months after the first trial site was planted, we are holding a farm walk to check its progress:

- What plants are growing well?
- Which plants have flowered?
- Matching flowering times with the presence of beneficial insects
- What have we observed with the insect monitoring?
- What have we learned?

Date: Friday 24th March

Where: 11 Fielder Rd, Cockatoo

Enter at the farm gate and park in main carpark

Time: 10:30am-12:30pm, finishing with lunch

Speakers:

Karen Thomas- Port Phillip & Westernport CMA
Setting up an insectarium on a horticulture farm

Linda Thomson- Melbourne University
Analysis of spring/summer monitoring at the trial site
