

# What are zines?

Zines are small, self-published booklets or magazines that are often used to express personal opinions or showcase creative work. They can be made out of a single sheet of letter-size paper, folded in a specific way. Here's how you can make a zine out of a letter-size piece of paper:

1. Start with a letter-size piece of paper (8.5 x 11 inches). You can use any kind of paper, but a lightweight paper like printer paper or newsprint will be easier to fold.

2. Fold the paper in half lengthwise, so that the shorter edges are touching. Crease the fold firmly. Then unfold it and fold in "quarter flaps" from the left and right to the center crease.

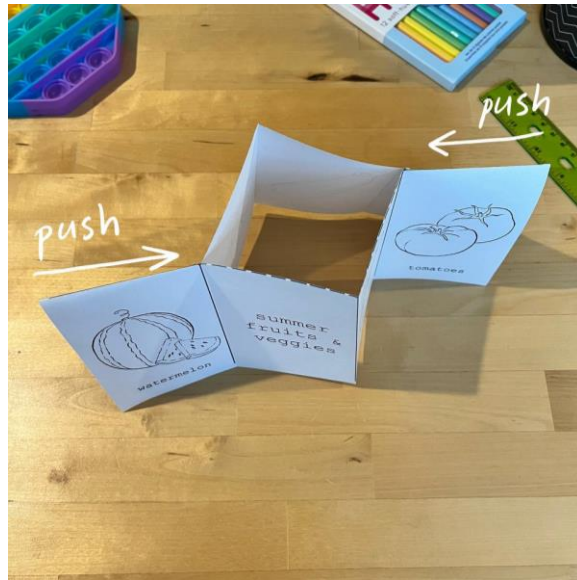

3. Unfold the paper and fold it in half widthwise, so that the longer edges are touching. Crease the fold firmly.

4. Unfold the paper. Fold in half lengthwise again, cut along the lengthwise fold up to the middle of the paper. This will create a slit in the center of the paper.

5. Fold the paper in half widthwise again, this time with the slit on the top. Push the two short edges of the paper towards each other, so that the paper collapses in the middle and forms a small booklet.

6. Fold the booklet in half along the slit, so that the front and back covers are on the outside and the pages are on the inside.

7. Now you can fill your zine with whatever content you like! You can write, draw, or paste images onto the pages. Be creative and have fun! For those of you who would like write names of fruits and veggies in languages other than English, I included zines without captions.
