

## Salta compared to other lined tubing:

In this comparison we'll be using measurements from Salta lined 2-3/8 compared to other 2-3/8 lined tubing.\*

|        | ID(in) | Drift Dia.(in) | Lined Wt.(per ft) |
|--------|--------|----------------|-------------------|
| Salta: | 1.875  | 1.725          | 4.990             |
| CO. A: | 1.640  | 1.540          | 5.400             |
| CO. B: | 1.780  | 1.650          | 5.200             |
| CO. C: | 1.710  | 1.600          | 5.100             |

\*Comparison does not include inserts.

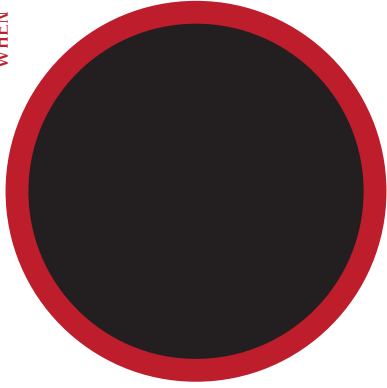

As shown in the comparison above, Salta has a larger ID, drift, and lighter weight.

By Salta having a larger ID, it gives us the capability of handling more water volume.

Which calculates into more production, meaning higher profits. And lighter weight can save money on trucking.
