Electronic paper technology: At the click of a button, pupils can access a wide range of thousands of readings

Portable e-reader pushes readers in remote school to epitome of literacy

About the e-reader

The pupils use e-readers during a literacy lesson.

Uplifting literacy

Digital publishing gives birth to healthy reading culture

For a long time, Trans Mara region has remained unaffected in terms of education, with high dropout rates and low enrolment of the girls in school. However, things are changing with the advent of digital publishing.

The project, which aims to increase reading habits among students, has been in operation for the past six months. It has so far reached out to more than 1,000 students at various schools in the region.

The project involves the distribution of e-books to schools, which are then accessed by students through e-readers provided by the project.

The e-readers are equipped with software that allows students to download and read books at their own pace.

The project has been hailed as a game-changer in the education sector, as it has not only increased reading habits among students but has also reduced the burden of carrying heavy textbooks.

The project has also been praised for its ability to provide access to a wide range of books, which can be downloaded and read at any time, anywhere.

The project is currently being expanded to other schools in the region, and it is expected to reach more than 3,000 students by the end of the year.
