Quintessentials — Tai Ping’s exceptional textures collection is one of the most sumptuous and sensible carpet options available for wall-to-wall carpets in the upscale category. Versatile, expeditious, and luxurious, Tai Ping’s pass-tufted carpet is increasingly specified by designers for their most prestigious high-end projects.

Pass-tufted carpet is a machine-made artisanal product with the custom features and impressive look and feel of a handmade rug. Made precisely to the specifications and dimensions of each project and often finished meticulously by hand, a pass-tufted carpet fits a room like a couture glove.

Tai Ping. Peerless since 1956.
One of the great advantages of pass-tufted carpet is its ability to fit a space—any space—perfectly. In fact, the mechanised process that creates the carpet is so precise that it is often selected specifically for its exactitude; pass-tufting is the ideal way to cover an irregularly-shaped room with a seamless, wall-to-wall installation. Area rugs can also be pass-tufted with beautiful results.

All pass-tufted carpets are created to custom dimensions and colours chosen from an extensive and sophisticated palette.
Pass-tuffed installations

As in all Tai Ping’s custom carpets, texture and fibre choice are paramount in determining the character and aesthetic of the final product. Pass-tufted carpet can be produced in cut pile or loop, cut-and-loop, and shag pile, and is available in the same fibres as Tai Ping’s finest hand-tufted collections. 100% New Zealand wool is the most common choice for pass-tufted carpets, though they are made regularly from luxurious silks, cotton and flax.

A pass-tufted carpet can be transformed into a completely unique piece with the addition of hand-finishing. Once a carpet has been tufted on the pass machine, it is taken to the hand-tufting workshop where Tai Ping’s skilled artisans can add custom pattern and texture by hand. There are two main techniques: over-tufting and hand-carving. In the first, a second pattern is hand-tufted on top of the pass-tufted ground; in the second, the pile is cut with scissors or a razor to create a one-of-a-kind sculpted surface.

— Flammability tests for Aircraft and IMO have not yet been performed on these products and the allocation of a PASS is based upon technical assumption.
— **Fair** or **loop pile products of this type, installed on stairs, can grip over the nosing.
— **Fair** loop pile products of this type may create a 'trip' hazard when installed upon stairs.
— Grading is based upon the following system – 10: Excellent, 7: Very Good, 7–6: Good, 5–6: Fair, 1–4: Poor.
— Traffic level's description are based upon those normally expected in the residential and luxury contract market area and do not necessarily compare to those referred to in the Commercial sector.
