

# Mustering

## Handheld smartcard reader & central monitoring center

### Overview

- Handheld smartcard reader allows muster wardens to rapidly check-in personnel
- Central command center provides muster administration and live monitoring of progress

### Components

- Handheld RFID reader (125KHz & 13.56MHz), includes iPod or iPhone
- User App for field mustering
- Server software for evacuation list set up, muster admin, live monitoring and reporting

### Integrated Architecture

- Integrates with existing RFID card infrastructure – e.g. Lenel, JCI P2000, Honeywell ProWatch
- Sources systems-of-record evacuation data from PACS & visitor systems, as well as csv file import
- mobss Industrial Internet-of-Things queuing architecture provides real-time integration with field handhelds

- Rapid muster of personnel during drills and emergencies
- Set up evacuation lists through file import or integration to PACS
- Connected readers and command center provide live view of muster progress in every zone
- Analyze drill and emergency performance through reporting
- Server software can be deployed on premise or on-cloud
