Current Estimated Biocidal Products Regulation (BPR) Timeline for Citriodiol®

**Present Situation**
- Draft CAR reviewed by Member States at Sept 2016 Working Group; additional data generated & accepted; transfer of dossier to CZCA; await feedback on timing of final evaluation

**March 30, 2019**
- Brexit postponed

**Citriodiol® dossier moved to Czech Competent Authority (CZCA)**

**Citriodiol® CAR revisions on-going**

**Expected date for decisions on PA dossiers including Citrefine’s BPF**

**Market Freeze Period**
- after formal Union listing of Citriodiol® only products already on the market and with submitted Product Authorisation (PA) dossier (or submitted letter of intent to seek Mutual Recognition) may remain on the market. Authorities may stop accepting new national registrations up to 18 months prior to formal Union listing, depending on Member State (MS). This is dependent on the length of time each MS product registration process takes in that country. Therefore please ensure that all your products are registered in each target country before the start of the market freeze period. Failure to do this will mean you cannot put a new product on the market for several years (3 years minimum). For more information about this please contact us.

**Current Estimated Biocidal Products Regulation (BPR) Timeline for Citriodiol®**

- **Transitional Period – National Regulatory Requirements**
  - October 2020
    - Prepare & submit Product Authorisation (PA) dossiers
