

FAQ's

Q. What Areas of my body can be treated with Micro Needling?

Micro-needling can be used anywhere on your body, including the face, arms, legs, chest, stomach, and back.

Q. How is Micro Needling done?

When you go in to your micro-needling appointment, the practitioner will prepare a sterile needle tip, which contains 6 micro-needles. A topical numbing cream will be applied 20 minutes prior to your treatment. Once treatment is started a syringe of high-quality hyaluronic acid is put on treatment area and micro-needling tool will be customized to treat the skin based on your unique needs. The practitioner will then pass the micro-needling pen over the area in a circular motion, until the area has been covered.

Q. What time till I need to set aside for Micro-Needling?

Micro-needling can be done very quickly and depends on the size of the area being treated, as well as other factors. Typically, the procedure takes as little as 20 to 30 minutes.

Q. What does Micro-Needling feel like?

Most patients associate the feeling of micro-needling treatment to the feeling of sandpaper being rubbed across the skin. Some areas, however, are more sensitive than others and treatment tends to be more comfortable the quicker the tool is moved across the surface of the skin.

Q. When will I be able to see a difference?

Immediately after the treatment, you may notice a glow to your skin. Over the course of several weeks changes will continue to develop in the skin as collagen continues to be produced. Your skin can continue to improve up to 6 months after initial treatment.

Q. How many times should I receive the Micro-Needling treatment?

The number of treatments recommended varies from patient to patient, but you may need treatments as infrequently as only once per year. It is generally recommended to receive 2 to 3 treatments spaced approximately 6 to 8 weeks apart. If you have deep wrinkles or other advanced skin blemishes that you wish to remove, 6 to 8 sessions of micro-needling at 6-week intervals is best.

***DISCLAIMER:** Results may vary depending on the patient's health history. While some of our patients had great results, results are not the same for everyone.
