Mapping For Future Growth
A workshop for resource managers, local officials, planners, developers, community members
and others interested in collaborative planning and public participation for community resiliency.
CHARM helps decision makers gather input and educate the public about the “what-ifs” of long
term growth and planning. Workshop participants collaborate over a live table-top interface and
use local mapping data to plan hypothetical growth scenarios for their community. Real time
feedback allows participants to see the consequences of their planning decisions. The planning
support tool encourages collaborative problem solving and no GIS experience is needed to
participate in a CHARM workshop.

TEXAS COMMUNITY
WATERSHED
PARTNERS

A Program Of Texas A&M AgriLife Extension

FEMA
A low cost “what-if” scenario mapping tool that brings together planners, developers, resource managers, local officials, agency staff, business owners and community members to actively participate in community planning activities.
