Croplands

Color Coordinates

Croplands

Color Coordinates

“For centuries, Agriculturalists have prepared fertile terrain by tilling the earth before planting their crops. This age-old practice creates a charming multi-layered organic texture, one that we found intriguing and inspired the design concept for Croplands”. A collection based on the foundation of earth tones, accented with the vibrancy of color to which nature effortlessly paints the landscape as crops come to life. Croplands modules work independently or in harmony with each other to enhance any interior space.

Created as a standalone base pattern, the multiple tonal accent colors enable selective placement of color modules to coordinate with the other interior finishes, providing complete freedom of expression.

The following guide assists to provide simple navigation for color coordination across our standard collections. Alternatively use our on-line (www.carpetsinter.com) 2D Simulation or 3D ‘Mix and Match’ Virtual Simulator (Download APP) to create your personalized interior spaces...
