

Hydronic System Sentry

Closed loop hydronic system feeder

The Hydronic System Sentry automatically supplies pressurized water or a water/glycol mixture to closed loop systems in order to ensure that minimum system pressure levels are maintained.

The feeder is ideally suited for use with boilers, chilled water, snow melt circuits, radiant heating, solar systems and outside air heating/cooling glycol coils.

Features and Benefits

- Automated easy fill feature simplifies the filling process
- Available in 3 sizes: 27L (7 gallon), 68L (18 gallon), 180L (48 gallon)
- Can use water or glycol
- Limits the amount of fluid discharge resulting from a closed loop leak
- Optional audio and visual low fluid level alarm
- Dry contacts for interfacing to external control systems
- Low fluid level switch disengages pump in the event of insufficient fluid
- No direct connection to potable water eliminates the need for a back flow preventer
- Standard 115VAC power supply
- The makeup fluid in the feeder tank can be pretreated
- Fluid can be conveniently drained for servicing and then replaced

Model HSS-27

27 litre tank, complete system

Model HSS-68

68 litre tank, complete system

Model HSS-180

180 litre tank, complete system

Model HSS-ALARM

Local low fluid alarm, c/w dry contacts
