REASONS FOR REFUSAL

A Summary of Objections in relation to Proposed residential development
Ref. 055590 Redrow Homes Ltd
on land off Chester Road, Pen-y-ffordd

This document presents the reasons why the Pen-y-ffordd Community believe that this proposal should be refused. It is a combination of local knowledge from the Pen-y-ffordd Community Group, supported by the Community Council, and the feedback of over 770 residents; along with local and national policies which the proposal fails to adhere to.

One of the 6 fields and some of the trees and hedgerows threatened by the proposed development

“you and your community are vital in the plan preparation as you hold local knowledge”
LDP Wales – Planning Your Community (Welsh Assembly Government Publication)

In Planning Policy Wales Edition 8 - January 2016 in Chapter 4.3.1 there is reference to the Well-being of Future Generations (Wales) Act establishing a Sustainable Development Principle. This is the wording:
“…a defined public body must act in a manner which seeks to ensure that the needs of the present are met without compromising the ability of future generations to meet their own needs. In order to achieve this principle we expect all those involved in the planning system to adhere to:
putting people, and their quality of life now and in the future, at the centre of decision making.”
This document sets out why adding this development to our village will harm the community and the quality of life of residents now as well as the reasons why it is unsustainable.

**Timeline**

**May 2016**
Redrow leaflet houses adjacent to the site indicating their proposal
Residents attend Community Council meeting to register objections.

**June 2016**
Redrow submit planning application.
First public meeting arranged by residents – hundreds of people attend.

**July 2016**
Further public meetings, each attended by hundreds of residents.
Leaflet explaining the plans distributed to every house in the village.

**August 2016**
Over 400 objections are sent to Flintshire County Council.

**September 2016**
Extraordinary meeting of the Community Council.
Agreement with residents to prepare a Community Development Plan.

**October 2016**
Residents group meets with Mark Tami MP and Andy Roberts at FCC.
Further public meeting, attended by hundreds of residents.

**November 2016**
Questionnaire is prepared by the Steering Group of the Community Group along with the Community Council and distributed to over 1,700 homes in Pen-y-ffordd, Penymynydd and Dobshill.

**December 2016**
774 responses received to the Questionnaire providing a strong voice of the community – data and comments from the Questionnaire are included throughout this document.

Part 1 – Evidence of Harm and Sustainability

1. Loss of Village (Harm)

1.1 This is a view of Penymynydd looking south-west towards Pen-y-ffordd and Hope Mountain beyond. In the foreground is the White Lion estate with its children’s play area. Beyond that are the fields proposed for development by Redrow.

1.2 The appeal of Pen-y-ffordd/Penymynydd for many villagers is its rural setting – to live surrounded by countryside. The agricultural grading of the land is not as important as the recognition that land is a finite resource and we have to cherish it and use it wisely.

1.3 The second part of the appeal of Pen-y-ffordd/Penymynydd is the sense of community – that it is a village, not so large that people don’t know what’s happening. That sense of community is brought about by a core population who are born in the village, grow up in the village and stay to bring up their own families in the village.

1.4 There are many different threats to village life in Wales. There are few remaining genuine village communities, where local businesses can thrive and sustain the residents, where the population is small enough that the sense of community is maintained – where village groups thrive, where the village gathers as a real community for special celebrations.

1.5 The sense of our village retaining the ‘feel’ of a village remains intact – just. This is the intangible thing that we believe makes this development unsustainable more than anything else.
1.6 The rapid growth of the past few years has put a strain on every aspect of village life, but most crucially to this delicate, fragile, undefinable sense of ‘community’. There are few enough settlements that have managed to thrive as a community – many have grown into sprawling small towns, many others have lost their shops, post offices and pubs to become sleeping communities. Pen-y-ffordd is a rare and precious success and it needs to be recognised as such.

Images showing St John’s Church, Penymynydd which hosts a well attended Choir.

Village Carnival Poster. The Carnival has been an annual celebration since 1922.

Attendance at the 2016 Bonfire was larger than ever with huge queues and the surrounding streets full of people.

The Pen-y-fforrd Community Centre full of Scouts and villagers for the 2016 Remembrance ceremony.

1.7 Pen-y-fforrd/Penymynydd is a fantastic place to live for lots of reasons and the residents are not completely opposed to new housing – what they want is small scale growth of the type of houses needed to maintain the balance of population – to include housing for elderly, for first-time buyers, some rented accommodation, housing accessible for the disabled or infirm, houses for families.

1.8 That does not mean no executive homes and no large homes, they are part of the mixture too. What will upset the balance of the community is large scale development with significant proportions of houses aimed at the same demographic, as we have seen recently.

1.9 Penymynydd and Pen-y-fforrd became joined physically during the housing growth of the 1970s, which brought new families into the community. Many of them have stayed and brought up their own families who are now doing the same.

1.10 The sheer scale of the most recent growth has started to dilute some of that community spirit and change the nature of the village – the fear is that additional large scale developments with a lack of houses which can be afforded by first-time buyers, will result in the next generation moving away. The sense of ‘family’ in the village is under serious threat.

QUICKENNAIRE DATA

When did you first live in the village?

1.11 In many cases family means family living nearby. That natural support network that stems from in-migration within a community is evident across the generations in Pen-y-ffordd. 40% of people living in the village have family living in the village (not in their home). Some are second generation, others have as many as four generations living in the village. That connection and support cannot be maintained without the right type of housing.

1.12 In response to this proposed development, a community group was formed, including County and Community Councillors, to create a Community Development Plan setting out the priorities and wishes of the village community – to guide the LDP process as well as future planning applications. The intention is to have a plan drafted and available by April 2017.

1.13 One of the first parts of the process was to share a questionnaire with every one of the 1,700 homes in the village. The responses from that questionnaire – in total 774 responses were received – provided data and comments from villagers which have been used throughout this document.

1.14 We asked people if they would share what brought them to the village in the first place and the answers vary depending on how recently people moved to the village, but the sentiment is consistent – here are the first 100 of those answers:

1. I was attracted to a small village location with good facilities and a community spirit, but this has been eroded over the years.

2. It felt like the village I was brought up in, housing, green fields surrounding the village, schools (there being no secondary school, I had to travel to next area for that). Now that village is a village no more.

3. Cheaper house prices than Chester, living in Wales (positive) and close family links.

4. I have grown up in Pen-y-ffordd all my life, most of my family also live within the village. We moved away from the village when we bought our first house, but have now moved into a New Build property on the Taylor Wimpey site.

5. Grew up here and stayed here

6. The fact that it is a village and village life and it’s a small village.

7. Secondary education at Castell Alun High School. Escape a large town, for a small village.

9. Reasonable price and easy access to Chester.

10. Family connection.

11. Village life and a sense of community, a small village where I can raise a family, surrounded by countryside.

12. I liked the idea of living and bringing my children up within a village.
13. the friendly people

14. A quiet life, away from the crazy world

15. Liked the idea of living in the countryside so that we could start a family in a friendly community. However, the village is quickly changing so it’s more of a rural area making us consider leaving as even in a few years, the community feeling is being lost.

16. the proximity to Chester, Wirral and North Wales Coast

17. Close to husband’s work, (we moved from St. Helens) Great proximity to shops at broughton and nightlife in Chester but still in a quiet community with lots of green

18. Me and my now husband bought a house, I lived in Hawarden and we couldn’t afford to buy in the area, he has lived in Pen-y-ffordd all his life and so we settled on Penymynydd.

19. House price

20. Married a bloke from the village who had a large family connection to Pen-y-ffordd

21. The rural feel and the countryside

22. Small country village with good access for work commuting

23. I worked as a nurse in Tunnel Cement and found Penymynydd so pleasant, small as it was then but we knew everyone and it was lovely, still is but in a different way now

24. Marriage

25. Accessibility to local schools (we didn’t want to move our children to new schools when we moved house). Still a village feel (only just though).

26. Rural area and schools

27. Four generations

28. It was a small countryside village with a lot of open green fields!

29. My husband’s employment. We moved a long way and chose carefully where to live as we were both born and bred within a village.

30. I was born here

31. Peacefulness

32. The location of my property not being overlooked !!!

33. Have lived here since I was 3 years old
34. Mum has lived here all her life. When she and Dad married they bought a house here and it was been the family home ever since.

35. That it was a village, nice and friendly with good schools.

36. Cheaper housing options than Chester (where I moved from) and easy access to the North Wales countryside.

37. Close to work in Mold and liked the village setting.

38. I have always lived in Broughton but moved to Penymynydd due to its small village feel and community spirit. I feel proud to be a member of this outstanding village.

39. It was in good commuting distance for work.

40. We moved to the area from Sheffield 22 years ago we chose Pen-y-ffordd because it seemed a nice community to bring up our children whilst having good road access for work and travel to the rest of the UK.

41. Affordable rental housing.

42. We were attracted to the village because of the public transport facilities and the amount of other amenities eg shop, pubs, post office, chippy, chemist etc. Everything is within easy reach.

43. Nicest development we saw in our area when looking for a new home. Fell in love with the village as soon as we drove through.

44. Location close to family in Buckley, work and access to Chester/Liverpool. Able to walk into countryside (Penymynydd woods) but still have local amenities.

45. Size, location, character - two of which have changed dramatically over 20 years...and not in a good way!

46. Born here, Love the place.

47. Started work at Airbus.

48. Close to where I was born, convenient transport links to Chester, where I work.

49. Liked the schools.

50. Lived in village since age 5.

51. Family connections.

52. Was born here.

53. How small and well kept the village was.

54. Initially the property, fell in love with it immediately but love the village itself.

55. I'm Flintshire born and bred and wanted a nice family house in a nice area.

---

**QUESTIONNAIRE DATA**

**What type of house do you live in?**

- Flat
- Terrace/Town House
- Semi-Detached
- Detached
- Bungalow
- Other

![Bar Chart showing percentage of responses]
56. The chance to live in a pleasant village environment in Wales, near to areas of exceptional natural beauty, with good facilities and good connections to larger urban areas.

57. New housing

58. Lived all my life

59. Great community, smallish village with easy access to motorways

60. We lived in Port Sunlight on the Wirral, the free paper advertised the new Bellway houses by the butchers, we drover over on the Sunday. It was a lovely sunny morning, we loved it and moved to our existing home 27/1/96. Love the village and the way of life, and so do our children.

61. I thought it was a pretty sleepy village with easy access to Chester and Wrexham

62. I was working in Chester at the time and Pen-y-ffordd was an easy commute. As a Welsh speaker I always wanted to move into Wales from mid Cheshire.

63. My fiancé has lived in the village all of her life.

64. Surrounded by green fields

65. My husband already lived and had a house in the village.

66. Family

67. I married a village girl

68. Location, close to Chester and North Wales and the lovely housing

69. I was born there

70. Employment opportunity

71. I have lived in the village all my life.

72. Came to view one of the new Taylor Wimpey houses and fell in love with the village

73. Penymynydd - pleasant and quiet

74. To live with my wife who was already a resident of the village.

75. Very nice village life

76. Work (Airbus)
77. My family have lived here all my life, on Hawarded Rd, we joined Pen-y-ffordd 1998. My children grew up here, have married and also live in the village. We need more 3 bed affordable housing.

78. I grew up here and it has always felt like home. It's a lovely village and I feel safe walking around.

79. I moved from the south and I have family in Chester. I work in Mold and I wanted somewhere close to both but quiet and not full of council housing or new build developments.

80. Airbus (worked there for 40 years) The village feel similar to where I originally lived. Good village interaction.

81. Desirable village, good community spirit, good schools and local pubs. Accessible to key towns and cities and employment.

82. We moved here because it was a village.

83. Cost and village life.

84. The small village life.

85. My parents moved here.

86. A larger home.

87. Our first family home.

89. To work in Wales.

90. It is a pleasant village in North Wales having close proximity to my employment at Llwydiarth, it was important to move to a village as we had previously lived in a village in Suffolk.

91. I thought it looked like a welcoming village to outsiders. Starting to question that unfortunately. The house I bought was what attracted me.

92. Work and Education.

93. We’re from Hope and Treuddyn originally and wanted to live somewhere local with good access to the A55 and within the Castell Alun catchment.

94. I was born here.

95. The new homes, location and general vibe of the village.

96. My partner works in Wrexham, and I was studying in Chester. We were looking to buy a house that had the potential to become a family home. The location of the village was a great plus for us, being close to the A55 as both our families live down the North Wales coast.
97. It was a village with good community spirit, good schools and easily accessible to work and services in nearby towns.

98. We lived locally. We desired a community that was friendly for our girls to grow up in, away from the larger towns of Buckley and Mold and city of Chester.

99. Community feel and this questionnaire is a shining example of that reason.

100. The size layout amenities and transport links were far better than the village we lived before also within the catchment area still for Castell Alun school.

1.15 There are lots of comments there but they give a sense both of the appeal of the village and the awareness of something being lost with the recent growth.

1.16 As a group of villagers, we have identified some of the tangible ‘harm’ and practical considerations through the eyes of the villagers as well as those Welsh Government laws and policies and Flintshire policies which we believe need to be considered before a decision is taken.
2. Pace of Change (Unsustainable)

2.1 This is the description of the village in the LDP settlement audit based on 2014 data:

**PENYFFORDD & PENYMYNYDD –**

**SETTLEMENT SERVICE AUDIT**

Settlement Commentary

Penyffordd / Penymynydd is a growing settlement which is located at the confluence of the A550 and the A5104 and has its own railway station on the Wrexham – Bidston line, one km from the village centre. The settlement has excellent communications to nearby towns and employment centres as well as further afield, given the presence of the railway station. The settlement has been by-passed (in 1966) along its western edge by the new line of the A550 and estate type residential development has taken place on either side of Wrexham Road and Hawarden Road. The settlement has two schools St Hohn the Baptist School and Ysgol Penyffordd (which is split between infants at Abbots lane and juniors at ‘fordd Penyffordd), and a range of local shops and facilities and is considered to represent a sustainable settlement. There is significant development taking place at the village at the present time which will benefit existing services and facilities. As part of new developments for example new sport and recreation facilities are being provided.

2.2 These are the housing and population figures:

<table>
<thead>
<tr>
<th>Settlement No. of Dwellings</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>2000 UDP Baseline Figure</td>
<td>1,340</td>
</tr>
<tr>
<td>2014 Housing Land Study</td>
<td>1,527</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Settlement Population</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>2001 Census</td>
<td>3,444</td>
</tr>
<tr>
<td>2011 Census</td>
<td>3,554</td>
</tr>
</tbody>
</table>

2.3 Where we quote settlement growth under the UDP and talk about 28% growth (referenced in detail in the policy section of this document), what that fails to express is the sheer rate at which that growth has actually taken place. If you look at these figures closely, it shows that the population between the 2001 and 2011 census' has increased by just 110 people (most on the Meadowslea site). Between 2000 and 2014, the number of dwellings increased by 187 and today we calculate the current housing figure to be 1,730 – which means that between 2014 and 2016 a further 203 dwellings. Combining both sets of data, it becomes clear that after small and modest growth over the first 10 years of the UDP, there have been close to 400 houses – over 1,000 people added in the past 5 years or less.

2.4 With planning permission already granted for a further 40 homes on Rhos Road, it is clear that this pace of growth is unsustainable because even the record keeping cannot keep pace, let alone the infrastructure.

This is the 'current' Ordnance Survey Aerial Map of Pen-y-ffordd – missing both the Wood Lane and White Lion developments
2.5 We asked the village what growth they wanted – we asked them to say whether they strongly agreed, agreed, disagreed or strongly disagreed or if they had no opinion – and we asked them to consider different levels of growth. These were the responses:

When thinking about new housing:

- **a)** I would prefer no more growth, the village is large enough
  - 78.1% Agree
  - 15.9% Disagree
  - 4.2% No Opinion

- **b)** I would prefer growth in small developments where there are no more than 15 houses
  - 49.9% Agree
  - 36.4% Disagree
  - 10.8% No Opinion

- **c)** I would prefer growth in medium sized developments where each development is limited to no more than 25 houses
  - 24.9% Agree
  - 63.2% Disagree
  - 12% No Opinion

- **d)** I would prefer growth in individual large developments (greater than 50 houses)
  - 7.6% Agree
  - 83.5% Disagree
  - 8.9% No Opinion

- **e)** I would like to see the settlement continue to grow and become a small town
  - 84% Agree
  - 12.4% Disagree
  - 5.5% No Opinion

2.6 It is clear that the vast majority in the village do not want developments of this scale.
This OS map of the village is the most current available but does not include the most recent developments – we have added the 3 most recent developments with houses shown in RED. Those shown in BLACK are the 190 houses proposed:
3. Rail Transport (Unsustainable)

3.1 Pen-y-ffordd railway station is sited outside the village and was originally Hope Junction station. The original Pen-y-ffordd-Hope station in the centre of the village closed (in 1962) along with the railway line which linked Pen-y-ffordd to Chester and Mold.

3.2 The Borderland railway runs an hourly service (weekdays and Saturday) and two hourly after 6:30pm and Sunday. It has old and refurbished diesel rolling stock with £100m investment plan for electrification on hold. The Wrexham-Bidston line future plan proposals involve partly electrified from Deeside Industrial Park to Liverpool with the addition of direct trains. Growth is limited on the Borderland line under the current agreement.

3.3 The train station provides a useful local service, but it is unrealistic to present it as a heavily used resource for commuters to work or places of learning. There is no pedestrian access across the A550 to either Pen-y-ffordd or Buckley train stations – therefore pedestrians travelling from Pen-y-ffordd must cross the A550 where the speed limit is 60mph and close to the busy roundabout at the junction with Rhos Road.

“An increase in the frequency of trains from Pen-y-ffordd Railway Station to every half hour would greatly improve the attractiveness of this service.”

“Transport links to train stations (either Penyffordd or Buckley) as it’s a 15-20-30 minute walk from some areas of the village.”

“Penyffordd Train Station (tourist trail not a good commuter route) - lived in village over 15 years, never used. In order to reach ‘anywhere’ you have to change at Chester or Wrexham so people opt to travel to those stations to reduce train travel time”
4. Bus Service (Unsustainable)

4.1 There are some commercial bus services connecting to Wrexham, Buckley, Chester and Mold though because of the routes, journey times and frequency, they are impractical for most working people to use for commuting. There are complaints about the reliability of the service and about the lack of non-peak services particularly on Sunday. The X55 service has been recently removed.

73% of villagers want better bus services at work times or to local medical and other services.

4.2 There is no bus service to Hope, which includes the medical practice. Most people in the village use cars as their only method of transport.

Flintshire County Council is currently in consultation for the removal of community transport services, the only way many older residents are able to access local services.

“We have no Sunday service to anywhere. Some people without their own transport have to work on a Sunday.”

This is an extract of the Sunday bus timetable:
"Penymynydd end needs a better service as majority of bungalows housing the older generation are situated here. The walk up Penymynydd Road from the No. 3 bus stop, with a shopping bag, can be quite a struggle!! Now they're stopping passes and buses???

"X55 - I know it's gone but working on the business park and then having to get a bus to Chester and then stand around waiting for the No.3 and then walk home in the dark/bad weather etc is dangerous. Maybe if a service was offered Just at peak times it would make money. The only other choice is get the X4 to Buckley and wait for the No.3 there. Either way it's not ideal."

"Totally inadequate as a regular bus user and paying passenger. No service at all from Penymynydd!"

"More frequent bus and train service would encourage me to use them and leave my car at home. Once an hour is a disincentive"

"As many of the older residents rely solely on public transport for banking, medical, shopping more services should be made available for them. Also people that rely on public transport to get to their work."

"Penymynydd has no public transport anymore and the walk to and from the middle of the village is too far for some of us with disabilities and age related problems. The bus service to Hope family medical centre runs only every two hours and is a problem. Community transport has to be booked in advance and does not fit with appointments at the Drs having to be made on the day, if there are any."

5. Surrounding Road Network (Unsustainable)

5.1 The local road network has become increasingly overloaded at peak times. During the extended improvement work on the A55 / A483 junction, adjacent to Chester Business Park, there was a recommended diversion on the A483 at Wrexham and at Llay which diverted traffic along the A550 to meet up with the A55, Chester bypass. Since that work was completed, many drivers have continued to use the A550 as a cut-through - partly because it is a shorter distance if travelling from Wrexham towards Deeside Industrial Park and onward to the Wirral or the North Wales coast, and partly because the A55/A483 junction improvements have not eliminated the queues for Chester bound traffic.

5.2 The consequence for Pen-y-ffordd is queueing traffic from the Penymynydd roundabout (Junction of the A550 / A5104) back to the Rhos road roundabout by Pen-y-ffordd Train Station, and often beyond. At the same time, traffic heading the opposite direction, for the same reason, queue from the right turn at Hope (the continuation of the A550 towards Wrexham) all the way back to the top of
Vounog Hill / Wrexham Road in Chester.

5.3 The school buses carrying students from the village to Castell Alun High School are regularly late for the start of school due to traffic delays – there are now 5 buses needed to accommodate all of the children for Castell Alun.
5.4 There are only 6 ways out of Pen-y-ffordd/Penymynydd by car.

5.5 (Map Ref 1) Exit to the south (Vounog Hill / Wrexham Road) onto the A550 - here the speed limit has recently been reduced to 50mph. A traffic island has helped for those entering the village, but it can be perilous pulling onto the A550 when traffic is free flowing, in either direction (an intention to
reduce the speed limit to 40mph was objected to). At peak times, it is necessary to 'push' into the crawling traffic.

5.6 (Map Ref 2) At the bottom of the village, where most people leave the village is the exit from Hawarden Road onto the A550. Here the speed limit has been reduced to 40mph and road markings provided to ease the traffic - but the majority of traffic leaving the village turns right, across the busy carriageway and into the, often queuing, traffic. The difficulty of this junction leads to queues back into the village at peak times.

5.7 (Map Ref 3) There is a main access point onto the A550 heading west where the bypass meets Rhos Road, close to the train station. At this point the A550 has the National Speed Limit and through traffic treat the roundabout as a chicane. This is also the point where pedestrians have to cross to get to the train station. At the weekend and in summer particularly, main vehicles pass through this roundabout enroute for Corwen / Llangollen and the mountains – particularly motorcycles, road cyclists and 4x4 enthusiasts.

5.8 (Map Ref 4) The third most frequented exit is at the top of Chester Road. Once traffic passes the village sign it is able to increase to 60mph. The junction of Chester Road and the A5014 is onto the busy trunk road with traffic arriving up the hill from Broughton at speed. People using this exit are again usually turning right towards Broughton, across the busy traffic. This has long been a popular cut-through and as the traffic on the A550 gets worse, increasing numbers of drivers come down the Vounog Hill, up Chester Road and out of the village. Alternatively they leave the A550 outside Hope and use Lower Mountain Road to access Chester Road (Map Ref 5).

5.9 Further to that, there are drivers who fork off onto the Old Hope Road (the old Roman road Map Ref 6), across the A5014 and up the single track lane to pop out at the A550 in Dobshill. There have been accidents at this crossroads involving drivers going straight across the junction. The Chester Road development would feed the majority of its traffic either through the village or via this exit.

5.10 (Map Ref 7) There is a second exit onto Chester Road (A5104) via Oakland Way on the new White Lion site. Following the introduction of a one-way restriction on the Chester Road end of Penymynydd Road, village traffic from Penymynydd can now exit the village via Oakland Way. This road is usually restricted with cars parked half on the pavement outside houses. The exit is into the 30mph limited section of Chester Road with left turns past the school. It is the easiest way out of the northern end of the village with the least traffic delay and is therefore increasingly popular.

“The road layout through the Heritage Park (Redrow White Lion) development to and from Penymynydd road needs serious reconsideration- heavy volumes of traffic using it as a cut through and travelling at speed through residential estate where children play - accident waiting to happen. Needs to be access only.”

5.11 (Map Ref 8) Finally, there are two ways out of the village along the single track lanes - Terrace Lane (off Chester Road) and Platt Lane (off Wrexham road) Both of these lanes connect with Lower Mountain Road which is without markings, and itself is used as a cut through by vehicles, including larger skip lorries, to avoid the congestion around Pen-y-ffordd, when travelling from Chester / Saltney / Broughton onto Hope and Higher Kinnerton. The route via Terrace lane will also be very convenient for residents of the Chester Road development.

“The roads in the village are used as rat runs at peak times because the local infrastructure is overloaded. Some strategic changes could alter that and..."
make it easier for villagers to get in and out of the village at busy times - the areas outside the
schools, shop and takeaway can become dangerously busy with pavement parking and maneuvering

“Speeding on lower mountain road. The majority of vehicles using LMR are not resident, but using it as a
short cut. Cars are racing at 50mph. Only a matter of time before fatal accident involving cyclists,
walkers, mothers with prams, we speed limit of 30mph”

“The road layout through the Heritage Park development to and from Penyynydd road needs serious
reconsideration- heavy volumes of traffic using it as a cut through and travelling at speed through
residential estate where children play - accident waiting to happen. Needs to be access only.”

“Old Hope rd - large traffic uses, this road, noisy and dangerous.”

“I live on Rhos Road and find it difficult to exit my drive in the morning as cars are using our road as a
rat run to avoid the congested, slow moving by-pass.
Would like traffic calming measures on Rhos Road.”

“Living on the outskirts of the village (Lower Mountain Road). I believe traffic is being diverted from the
village and the bypass to the roads less able to cope with the volumes and far more dangerous and
robust and more account of this situation needs to be taken by various councils”

“The new estate at the top of Penyynydd Road NEEDS speed bumps ASAP. People are driving around
the road far too fast, and as there are no markings on the road due to it being thin, they are driving in
the middle of the road around blind bends and then slamming their breaks on in shock when they meet
someone. It is utterly ridiculous and dangerous. As I no longer use the one way (as it is still marked
access only), using the road through the new estate has added another 5 minutes to my drive home
because of the cars parked on blind bends and meeting people driving at such a high speed. This really
needs addressing before there is an accident.”

“I think the access only into Penyynydd should have been reinforced, it has never been acted on
previously despite police presence, this way we may have been able to reverse out of our drives in the
morning effectively and not have to wait due to ongoing traffic”

“Vounog Hill should have calming restrictions at the FULL length were at present cars speed down
especially at night times...an accident waiting to happen for the pedestrians’ on the kerb side.”

“Urgently need traffic calming measures in place on Rhos Rd/Corwen Rd. Pedestrian access across that
road to access the Infant School site is very dangerous. Numerous pets killed on this stretch of road as
very few adhere to 30mph speed limit.”

“We need a speed limit on lower Mountain Road some drivers are speeding at 60 mph and above. This
road is now used as a shortcut for aerospace workers who avoid the traffic calming measures in the
village”
“poor transport links and roads are far too busy. Lack of parking where required forces bad parking by individuals. Excessive amount of speed bumps. Too many houses placed into a rural village with ever increasing amounts of vehicles. Too many houses parking cars on road rather than off road. Too many vehicles present at busy times e.g school blocking access”

“HGV in village, poor road surfaces, cars speeding on lower mountain road, terrace lane, platt lane and entry points to village.”

6. Roads in the Development (Harm & Unsustainable)

6.1 There is a single exit from the development in the plan, with the option to open up a link through Holly Drive. Holly Drive is a narrow cul-de-sac unsuitable for heavy traffic.

“If Redrow build their intended new homes and Holly Drive is opened up to the people on the estate I will be very concerned about the increase in traffic near our home and the safety of my young daughter.”

6.2 Residents of the similar sized development at the Groves (235 houses when complete) already complain about the number of vehicles using the single entry / exit. This solution is unsustainable.

“An extra traffic outlet from the Groves Estate. Maybe a roundabout on the by-pass as they have done in Gwersyllt. This would ease traffic in the village.”

“Some road markings at the junction where silver birch way meets the left turning as you head in to the new estate as it's a very dangerous junction and people just don't stop and the treat the junction as a bend”

7. Potholes (Unsustainable)

7.1 The road surfaces around the village are in poor repair already - significant increase in traffic journeys – estimated to be over 1,000,000 more annually - will exacerbate this problem.

“Re-laying of the road surface on Penymynydd road and speed bumps taken to the end of the road (Oakland way on the White Lion estate) rather than just stopping, so people can speed up around Oakland Way.”

“Road surfaces are shocking! Roads not resurfaced in years. Potholes.”

7.2 The other significant modern phenomenon is the use of internet shopping. Over half of the villagers said that they were receiving online deliveries weekly of several times a month – this is increasing the number of van and commercial vehicle journeys into the village and damage to the roads.
8. Traffic Impact inside the Village (Unsustainable and Harm)

79% of villagers want more car parking at village hotspots

"Hawarden Road around the Spar needs a complete rethink hundreds of cars and commercial vehicles every day scramble for the 5 spaces they have, the road is constantly blocked with huge delivery vehicles and it's no longer acceptable for visitors to block driveways and illegally block pavements. It's time to either find a more suitable site or impose yellow lines or traffic wardens”

"Parking on new estates poor - can hardly get 2 cars to pass”

8.1 Car parking is an issue for many residents.

8.2 Garage sizes are too small for modern cars, increasingly households have 2 or more cars and resort to parking on the pavement.

67% of villagers have 2 or more cars.

8.3 This is evident all over the village but particularly outside the village ‘hotspots’ for traffic. The Spar is the only local shop with just 4 car parking spaces and 1 disabled space - cars regularly park on the pavement around the site, blocking the pavement and dangerously narrowing the road, which is busy at peak times.

"Parking outside the spar shop is ridiculous. There is often a gridlock during peak times and visibility is restricted. There’s an accident waiting to happen!"

8.4 The Pen-y-ffordd junior school on Penymynydd Road has cars parked for significant lengths of time around school start and close times as well as during events. This causes the road to be narrow and congestion in and around the school - dangerous for children and inconvenient for both pedestrians and road users.

8.5 The proposed new school sited on the current Abbots Lane infant school site, will mean that children from the Chester Road development of infant and primary school age will be attending either the St John's school (with very limited places) or more likely Ysgol Pen-y-ffor dd which will be more than 30 minutes walk with small children and so is more likely to be a journey taken by car – further increasing traffic directly through the village centre.
8.6 The area around the village takeaway suffers similar problems in the evenings and the increasingly busy Oakland Way can be difficult to negotiate by car and as pedestrians as cars parked half on the pavement restrict the flow into and out of the village.

8.7 Some residents have expressed concern about the safety of dozens of children waiting for school buses close to the Pen-y-ffordd bypass (A550) – there are currently 5 dedicated school buses running from Pen-y-ffordd to Castell Alun each day.

8.8 There are grave concerns about the safety of the vehicular access both directly onto Chester Road where there is a blind brow and the National Speed Limit, but also for the increased traffic departing the village at the top of Chester Road and Old Hope Road at the junction of the A5014 Mold Road. There have been serious accidents there, the most recent on 1 October 2016. Sadly past accidents have included fatalities. We do not believe that the traffic report adequately assesses this risk and advise an expert second opinion.
8.9 This is an extract from the Evening Leader newspaper 3rd December 2016, referencing problems with traffic on Penymynydd Road following changes to the traffic flow after the completion of the Redrow White Lion development. Previously there had been lower traffic volumes and limited access, but the new development and road changes have caused problems for the old residents of Penymynydd Road and the new residents of Oakland Drive, and genuine safety concerns for pedestrians.

8.10 This sort of unintended harm is very real for residents and a grave concern for the Chester Road development and the potential for future impact on Chester Road and Hazel Drive particularly.
9. Lack of School Places (Unsustainable)

9.1 School places in the village are limited right now. There is a plan for a new single site school to replace the infants / juniors of Ysgol Pen-y-ffordd sited on Abbots Lane (the plan is by 2019), but that will only increase the number of places in line with the capacity and needs of the village today (by a maximum of 60 places), it will not provide for additional capacity.

9.2 The provision of S106 contributions to schools on the previous two developments in the village were not forthcoming in time to be of benefit to the new residents of those developments and therefore the provision of S106 money, while welcome, should be given reduced consideration in light of its effectiveness at fulfilling the needs of the residents of the community in real terms. Practically, St John’s School has used the White Lion S106 money for laptops and internal improvements, both welcome, but neither increase the capacity of the school to accommodate the extra children.

9.3 There is further concern about the number of spaces available at the closest secondary school, Castell Alun in Hope and it is already the case that children from St John’s school who finish year 6, will be allocated to Castell Alun or Hawarden High School dependent on where they live – this separates friends but there is insufficient capacity at Castell Alun to make exceptions.
10. Broadband Provision (Unsustainable)

10.1 According to the latest OFCOM data (2013) Pen-y-ffordd & Penymynydd post codes (where data is available) have a median average broadband range of 1.4-30 megabytes per second with most postcodes at 3 mbps. Accordingly it is to be expected that broadband provision in Pen-y-ffordd & Penymynydd is very poor and highly constrained indeed many areas are likely to struggle to access broadband speeds in this locality. This will have a negative effect on businesses in their day to day activities and on local residents seeking to access online services such as banking, post office services or online shopping.

10.2 That is an extract from Flintshire Local development Plan, Flintshire County Council – Planning Policy December 2015

“…there is fibre optic broadband, but that seems to be for the select few”

QUESTIONNAIRE DATA

- Never
- Weekly
- Occasionally
- Several times a month
- Several times a year

90% Have Home Internet
11. Open Space (Unsustainable and Harm)

11.1 Open space in Pen-y-ffordd is a significant failing in past developments and the village would require significant new open space to provide the correct provision under HSG8. In 2005, at the last measure, there was 0.85 Hectares of open space in Pen-y-ffordd against a recommendation of 5.9 Hectares. Newer developments since then have provided only for childrens’ play provision. There is a significant lack of planning affecting Pen-y-ffordd and steps must be taken during the preparation of the LDP to address the shortfall.

11.2 One practical and real life harm from this lack of provision is with dog walkers. There are no public open spaces in village where are dog can be allowed off the lead. No dogs are allowed on any of the public open spaces currently due to the proximity of children’s play areas. There are a few footpaths where dogs are regularly walked on public footpaths and the most heavily used footpath in Penymynydd is through the fields proposed for development. In practice, many dog walkers circuit the first field, since it is a large open space for the dogs.

11.3 Since the additional housing was added to the village there are visibly more people walking dogs within the village itself. Among the many dog walkers there are a handful who are irresponsible and allow their dogs to foul the pavements. This has become such a problem in recent months that it has made the local papers – it is in fact the number one complaint in the village in our Questionnaire. It is not helped by the fact that there are too few dedicated dog-waste bins in the village and the bins on the play areas on both the Groves and White Lion sites are rarely emptied.

1 in 3 residents own a dog
12. Waste (Unsustainable and Harm)

12.1 We understand that Welsh Water have objected to this application because the main sewer in the village is already beyond capacity. There are recurring problems with sewers in the village involving overflowing, flooding and smells. The issue of sustainability is key in respect of development based solutions and S106 money. In practical terms, the main sewer in the village is too small for the number of houses using it.

12.2 Work-around solutions involving temporary storage and pumps - as was the case on the adjacent White Lion and Meadowslea sites - are not sustainable. In order to consider the sustainability of the development, it is imperative that it is considered within the wider context of the whole village capacity and not simply managing the capacity of the development in isolation – pumping into an already over-loaded sewer will create future problems.

"Drains smell on new Redrow estate are appalling even in colder months."

12.3 This frustrated quote is from a resident of White Rock Road on the Wellhouse Estate.

"Constant problems with water pressure and drains. The problem has recently got worse since the development of Redrow and Elan in the last 3 years! We are now waiting for 12 metres of new drains to be installed as ours have collapsed. This is due to be started in the next few weeks we hope! Water pressure is so so low and have had to install pumps on shower units to enable them to work!"
13. Surface Waste (Unsustainable and Harm)

13.1 The soil on the site is heavily clay based and does not drain well. The ground is boggy for most of the winter, gardens on the White Lion site and adjacent Wellhouse suffer the same problem. There are real concerns that the removal of green land will introduce problems with water runoff which could adversely affect properties on low ground.

Views from the centre of the proposed development looking East towards the farmhouse and West towards Wellhouse showing the drop off of the land

13.2 The Chester Road fields contain the highest ground around and slopes off to the west towards Wellhouse and to the east towards the farmhouse and Chester Road.

“Gardens on the Redrow [White Lion] estate have poor drainage and are prone to flooding”

13.3 Gardens on the Wellhouse Estate have always turned to bogs during the winter because the clay under the soil does not drain well.

13.4 Further down Penymynydd Road, the waste pipes carry the re-routed stream (which used to run down a ditch alongside the road) and cannot cope with the water from the housing estates on higher ground (including Wellhouse, adjacent to the Redrow site).

“This is Penymynydd Road (Nov 2016) outside the Village Institute after heavy rain.

“Would like to see improvements to the drains to alleviate the backup of main water backing up through the grids in the lower part of Penymynydd road and Chester Road around the village institute.”
14. Water (Unsustainable and Harm)

14.1 There are no mains water pipes wider than 6 inch in the whole of Penymynydd. The new houses are connected to the original 3 inch pipes along Penymynydd Road, which originally fed the handful of houses that ran from opposite the school towards Pen-y-ffordd.

14.2 The addition of several large housing developments in the 1970s fed off this supply, followed more recently by developments of Hawarden Road and the latest White Lion development - upwards of 500 homes off the original water supply intended for fewer than 50 homes. The current monitored water pressure is just above the minimum threshold, as measured at the mains supply pipe.

"We regularly have no water or discoloured water due to water leaks. Minimum four plus years times a year since we have lived in our house over the last three. Each year the repairs seem to take longer and we have to run the water for longer to clear it. When on a water metre we are being charged to help clear the water boards repair. I have never experienced as many water faults living here than anywhere else I have lived."
14.3 This plan of the village, from Dee Valley Water (with the pipes enlarged and scaled according to diameter), shows the water supply in the area of the proposed development. The original pipes onto the village, along Hawarden Road and Penymynydd Road were 4 and 3 inch diameter respectively. The three new estates which branch off those roads are each fed by a core 6 inch pipe, which connects to the narrower original supplies. There can be no extra water capacity until the main supply to the village is upgraded – that is why there are so many problems with water pressure.

14.4 At peak times, the water pressure experienced in households on the Wellhouse and White Lion estates means that a tap running downstairs leads to showers stopping upstairs. There is no water main on Chester Road, therefore the proposed development will have to draw off the same water supply with an additional 190 houses, most of which have two bathrooms.

"Since moving to the village our water pressure has been up and down, and some days no water at all!"

14.5 Dee Valley Water are investing £6m in improvements to the water pipes in Flintshire:

![Image of Dee Valley Water announcement]

We’re investing £6 million in the water network in north east Wales to provide customers with clean fresh drinking water for years to come. To do this we will be renewing and clearing around 60km of pipe.

But sadly none of this investment is earmarked for Penymynydd or Pen-y-ffordd (it is being spent on Sandycroft, Connah’s Quay, Bagillt, Buckley, Queensferry, Mold, Mancot and Mostyn).

15. Affordable Housing (Harm)

"I am a youngish person who in the next couple of years would like to buy my own house and would like to stay in the village. But for that to happen we need affordable housing."

"A large proportion of the houses built are not affordable. If they are then they’re not very big and have very limited parking. Perhaps some apartments may be a better option."

15.1 It is clear that the village enjoys a strong sense of its identity through families staying in the village generation-by-generation. For that to continue at all requires some homes to be affordable. The prices of the White Lion Redrow homes which have been re-sold are more equivalent to the same house-types on the fringes of Chester – prices out of reach of many existing villagers and certainly first-time buyers or those looking to downsize.
16. Healthcare (Unsustainable and Harm)

16.1 There is currently a wait time of up to 5 weeks for doctor’s appointments at the surgeries in both Hope and Buckley. The re-location of the medical practice in Hope to a new surgery building has not changed the situation, it has made car parking easier, but not access by public transport. There has been no increase in the number of doctors working there, although there have been personnel changes.

“I had a very poorly baby recently and feel the lack of medical facilities really was a struggle for us as not many nurses or health visitors will come out to home.”

16.2 There is no A&E Hospital in Flintshire. The closest to Pen-y-ffordd is Wrexham Maelor, which is consistently one of the worst performers in Wales with just 72 percent of patients seen within 4 hours and hundreds of people waiting for more than 12 hours (during October 2016) according to Welsh Government figures. Right now Wrexham is under ‘Special Measures’.

16.3 This is supported by anecdotal evidence from villagers who are frustrated by the poor service. The alternative in England is the Countess of Chester which is threatened once again with a merger with Wirral hospitals.

“It’s about time we had a proper medical centre, if you want to see a doctor you have to go to Buckley and then walk half a mile from the Cross to Hawkbury”

16.4 This data from the village questionnaire along clearly demonstrates that villagers are not being provided with adequate access to medical facilities today. Adding an additional 500+ residents will only make the problem worse for new and existing residents.

Part 2 - Planning Policy

There are a number of planning policies in the Flintshire Unitary Development Plan and Planning Policy Wales which are not complied with in this application.

For absolute clarity, we received this correspondence from Lesley Griffiths AC/AM, Cabinet Secretary for Environment and Rural Affairs, 18th August 2016:

With regards to your query concerning the decision making process for planning applications, Flintshire County Council’s Unitary Development Plan will remain extant until replaced by the Local Development Plan. It is for the decision-maker, in the first instance, to determine whether policies in an adopted development plan are outdated for the purposes of determining a planning application. Where this is the case, local planning authorities should give the plan decreasing weight in favour of other material considerations such as national planning policy.

17. Prematurity

17.1 Planning Policy Wales Edition 8 - January 2016 - Chapter 2 Local Development Plans 2.8.2 refers to the question of prematurity, “Refusing planning permission on grounds of prematurity will not usually be justified except in cases where a development proposal goes to the heart of a plan and is individually or cumulatively so significant, that to grant permission would predetermine decisions about the scale, location or phasing of new development which ought to be taken in the LDP context.”

17.2 The Flintshire Unitary Development Plan, adopted in Sept 2011, described growth of between 8 and 15% (an increase of 110 - 205 additional houses against the baseline count of 1,370 houses). The village has not changed significantly since then in terms of facilities or services (there has been the introduction of a handful of new businesses and the loss of others).

17.3 Between the baseline date and today, there have been close to 400 new houses - nearly double that intended. The new Local Development Plan is not significantly progressed, but has reached a stage where settlement sizes have been assigned and consulted on. Pen-y-ffordd/Penymynydd has been described as a Sustainable Village - this is the third largest of five tiers. What that means in growth terms under the LDP is yet to be decided.

17.4 The projected number of houses needed across Flintshire is currently under consultation - figures range from 4,000 - 10,000+. At the same time, the consultation is looking at 5 different Spatial options:
Option 1. Shares developments across all of the settlements in the county according to settlement size. With this option, we would expect modest growth of less than 8% in the plan period.

Option 2. Centres developments on only the largest two categories of settlement, therefore Pen-y-fforodd/Penymynydd would be unaffected.

Option 3. Centres development on the economic growth area around Deeside and would bring growth to all settlements within that area, irrespective of their size. In this instance, Pen-y-fforodd would expect further development.

Option 4. Centres development along transport corridors, which include the Borderlands trainline - this would affect Pen-y-fforodd.

Option 5. Flexible, Sustainable Development. It is not clear how this option would affect Pen-y-fforodd specifically but it is reasonable to expect low growth given the impact on the village from previous overdevelopment.

17.5 Whether Pen-y-fforodd/Penymynydd is to be considered for further development at all is currently being considered under this Spatial Plan consultation. Add to this that the scale of this proposal alone would increase the village size by over 10% based on current housing figures.

17.6 There are 44 candidate sites in the LDP within Pen-y-fforodd - 29 of which are land for housing development. Three of those refer to all or part of the same land at Wood Lane Farm:
17.7 This is land to the north of the recent Taylor Wimpey development (where 235 houses are in the process of being built). This is space for 94 homes at the same density as the adjacent site.

The site at Rhos Road:

PEN039 Rhos Road 1.57806 hectares
PEN014 Rhos Road 1.57806 hectares

has already been approved for planning for 40 houses – it features twice in the Candidate Site register.

17.8 In total, removing duplicates, there is 29.166 Hectares of land for housing in the Candidate site register.

17.9 At a density of 0.04 houses per Hectare (as per Rhos Road approval) this could yield 729 houses. It has not been decided whether Pen-y-ffordd will have any new development in the coming LDP and indeed when you assess the consultation on the number of homes to be built in Flintshire varies from 3,750 – 10,350, it would be unlikely that Pen-y-ffordd would be expected to contribute a high number of homes given the number of available locations submitted countywide.

17.10 Together these factors suggest that the consideration goes to the heart of local development plan as it impacts Pen-y-ffordd and the surrounding area and should be considered properly under the LDP.

17.11 In a recent LDP meeting with local councillors, Elwyn Thomas of Planning Aid Wales outlined the need for an even spread of developments that should not be concentrated in one area. A fair distribution of growth is needed and the LDP process should be the enabler for that.
17.12 For reference – this is off Oak Drive, part of the Groves (Taylor Wimpey) development. It appears to be an access road to the field behind the new houses. The field is one of the candidate sites (PEN010 0.66 Hectares) for consideration in the LDP. It could be presumed from the existence of this access ‘road’ that the developer is expecting to get planning permission to continue building on the field.

This is a view looking North West from Platt Lane towards Hanson Cement. The red areas are some of the candidate sites at the top of Pen-y-ffordd – please note that one of them is the Abbots Lane school site which is likely to be proposed as the site of the new school.
17.13 As recently as January 2017 a new developer is consulting villagers on a proposed development of 32 ‘retirement’ flats. These are the areas of the village around Rhos Road which are affected by existing, approved and pre-application developments, as well as LDP candidate sites:

17.14 What the latest proposed development raises is the prospect of building which is more suited to the needs of the community, which in isolation should be encouraged, but outside of the LDP, outside of the settlement boundary and therefore outside of process, is threatened because of the scale of the earlier Redrow application.

17.15 While the council continues to support applications outside of the settlement boundary and outside of the LDP process, developers with intentions to submit future applications are compelled to submit early and outside of the process in order to reduce the risk of being ‘left behind’ or ‘missed out’ while other developments are passed. The very fact that applications have been supported and approved outside of the LDP, such as the Rhos Road site, is bringing forward more applications outside of due process.

17.16 If the village is to grow further over the coming 10-15 years, then it must be in a planned way, with priority given to applications which suit the needs of the community, as laid out in the Community Development Plan.
18. Coalescence

This is an extract from the Flintshire candidate site map showing Pen-y-ffordd (circled in green) with the Buckley sites creeping closer (top left), Kinnerton on the right and Warren Hall top right.

18.1 There is real concern about the development taking the village boundary ever closer to neighbouring Broughton and Kinnerton.

18.2 There is an advanced proposal to develop Warren Hall Business Park - it is one of the showcase projects in the North Wales. The original proposal was to create 7,000 jobs but we understand from Flintshire that the realisation will be a mixed development of commercial and homes.

18.3 Warren Hall would bring the industrial development of Broughton to within a handful of fields of Pen-y-ffordd. We would like to protect this particular boundary and would like it considered within the wider context in the LDP.
18.4 The recent significant development of Drury has brought it closer to Dobshill and the huge number of large sites proposed in Buckley under the LDP could bring Buckley close to Padeswood and to Pen-y-ffordd.

18.5 There is precedent for coalescence – Pen-y-ffordd and Penymynydd were allowed to join together in the 1970’s. In the forthcoming LDP our neighbouring villages – Hope, Caegwrlé, Abermorddu and Cefn-y-bedd have been considered as a single ‘service centre’. Buckley, Drury and Hawarden have now coalesced
19. Emerging LDP

PPW 2.8.1 The weight to be attached to an emerging LDP (or revision) when determining planning applications will in general depend on the stage it has reached, but does not simply increase as the plan progresses towards adoption.

19.1 Pen-y-ffordd/Penymynydd has already been categorised as a ‘Sustainable Settlement’, the third of 5-tiers in the hierarchy of settlement sizes under the new LDP. Alongside Pen-y-ffordd in that category there are other settlements which have seen significantly less development under the UDP and therefore, given the sheer number of Candidate sites proposed across Flintshire, we believe that Pen-y-ffordd is not be subjected to as much as 10% growth under the LDP.

No of houses calculations based on 0.04 Hect per house

19.2 If you consider this analysis of all the 394 candidate sites to be reviewed as the next stage of the LDP process, it is clear that there is far more potential than the maximum number of homes needed in the LDP period (3,750 - 10,350 homes).

19.3 How frustrating would it be to follow the democratic LDP process, get that outcome and find ourselves with 190 extra houses that cannot then be ‘unbuilt’. Land is a finite resource.
20. TAN1 and Planning Policy Wales

20.1 What is significant about Planning Policy Wales is that it sets out the basis of plan based development policy:

**PPW 1.2.1** A well functioning planning system is fundamental for sustainable development.

20.2 While the UDP is time expired, and the LDP not in place, consequently the policies set out in the UDP remain extant. The is agreed by Lesley Griffiths AM and Andrew Farrow, Chief Officer (Planning and Environment) at Flintshire County Council. It is also understood that UDP policies have decreasing weight in favour of national policies at the discretion of the decision maker.

**PPW 1.3.1** …ensuring that all interested parties are fully consulted, particularly on development plans and planning applications;
…treating everyone fairly

**TAN 1 6.2** The housing land supply figure should also be treated as a material consideration in determining planning applications for housing. Where the current study shows a land supply below the 5-year requirement or where the local planning authority has been unable to undertake a study (see 8.2 below), the need to increase supply should be given considerable weight when dealing with planning applications provided that the development would otherwise comply with development plan and national planning policies.

20.3 Everyone involved in planning in Wales is familiar with TAN1 and the effect it is having on areas which are desirable to developers. In order for the planning system to function properly, it is imperative that the UDP policies retain significant weight until the LDP is ready. It is vital that the planners and planning committee stand against developments which are clearly attempting to exploit TAN1.

20.4 There is an urgent need for Local Authorities and Welsh Assembly Government to clarify the scope and intention of TAN1 if we are to avoid irreparable damage to border villages and consequently to the validity of the whole LDP process. It cannot be underestimated the level of distrust in a planning process that allows development in breach of policy as has happened in Pen-y-ffordd already and is happening all over Wales under TAN1.

20.5 In the appendices of the Flintshire LDP Spatial Plan it explains that the failure to build all of the houses planned under the UDP is not the responsibility of the Council:

1.5 It is also the case that the Council is planning for a new plan period, 2015 – 2030, and within it a new assessment of housing need. There is a perception amongst some observers, particularly members of the development industry, that the Unitary Development Plan (UDP) has somehow failed to deliver all of its housing requirement and as such this under-delivery should transfer over into the LDP time period (i.e. that the ‘unmet need’ from the UDP should be added onto the LDP housing requirement figure). There is no logic in reality to this ‘numbers game’, as it is not the case the UDP failed to deliver its housing requirement, for the simple reason that the UDP did not and cannot ‘deliver’ housing on the ground per se. The plan makes provision for enough land to meet the housing requirement – it is the interaction of the market and development industry that determines if and how many of these homes are actually delivered. In Flintshire

20.6 The economics of house building seem clear. Developers have the capacity to build a finite number of houses each year. They are constrained by three things:

1. Money - in the form of cash flow
2. Builders – physical building capacity
3. Land – with planning permission
20.7 The primary objective of most developers is to return a good profit in order to pay a dividend for shareholders. With the limitations of money and capacity, they want to devote their resources to the most profitable projects. That means they will always favour land which offers the greatest yield. TAN1 inadvertently opens up prime greenfield land, in very marketable locations, to developers.

20.8 Inevitably developers will prefer these prime sites over the remaining, less lucrative and more expensive to develop, land in the UDP, if the planning system allows them to. As we can see from the local picture:

20.9 There is an absolute responsibility on the planning departments locally and nationally to protect against the abuse of the system through TAN1 and ensure that land is brought forward according to policy.

20.10 With a UDP policy specifically intended to protect again cross-border developments: UDP Chapter 11.17 “…avoid the over development in villages, and to protect against provision for displaced housing from Cheshire, especially in border areas around Chester. In the past such demand has led to excessive growth in some village which cannot be sustained. - how have so many of these speculative developments been allowed to go through?

20.11 After a number of significant cases in Mynydd Isa, Ewloe and indeed Pen-y-ffordd (Rhos Road), more recently there appears to be a shift towards a better balance of housing need and planning policy. This is demonstrated in these two recent cases:

Appeal Ref: APP/A6835/A/16/3148776
Site address: 2 Houses on Land at Rhyddyn Farm, Bridge End, Caergwrle, Wrexham LL12 9AY

Cyf ffeil/File ref: APP/Z6950/A/15/3010121
TOWN AND COUNTRY PLANNING ACT 1990 SECTION 78 APPEAL BY TAYLOR WIMPEY PLC
LAND SOUTH OF PORT ROAD WEST, WEYCOCK CROSS, BARRY
Residential development of up to 200 no. dwellings and associated works
20.12 In both of these instances the 5-year supply and TAN1 was referenced but not considered to outweigh the other policies including the settlement boundary.

21. Brownfield Land

**PPW 11.6 National Planning Guidance** …as much new housing as possible within urban areas. This includes the use of derelict, unused or waste land (brownfield land) as well as the reuse of buildings. The aim is to promote regeneration and reduce the pressure for development on greenfield sites and the open countryside.

**UDP 11.7 National Planning Guidance** also requires local authorities to apply a search sequence in identifying sites to be allocated for housing in the UDP. This means that previously developed land or under-used buildings, including surplus employment land, should be allocated for housing before new greenfield sites.

21.1 There is a plot of land in Pen-y-ffordd where planning permission has been granted for the erection of homes (Planning Application Ref. 053417) on the site of a derelict medical centre. We understand that the applicants are unable to build the houses because of the S106 conditions applied to the permission make it unaffordable. As a point of fact: this is brownfield land, it is land available for house building, it is real, residents have to look at it every day.

21.2 Land is a finite resource and must be used with great care and consideration.
22. Housing Need

22.1 Policy HSG3 requires that any development proposals resulting in a growth of more than 15% will need to be justified on the grounds of housing need.

22.2 The most current information about actual need for housing, as opposed to the arbitrary and unsustainable 5-year calculation, is Housing Topic Paper No 10 of the LDP produced by Flintshire County Council Jun 2015:

Population growth is slowing down in Flintshire in comparison to historical trends (the last 30 years). 2011 Census based WG projections indicate that Flintshire’s population is only likely to grow by 2% over the plan period for the LDP; • This is due to a combination of changes in the trends for both components of population change i.e. natural change (births and deaths) and migration. Positive natural change is slowing down (more births than deaths) and migration change is neutral; • Flintshire’s population age structure is aging which will have implications on the demand for new housing as well as more specialised types of housing need.

22.3 This suggests that under the LDP, the need for housing would be limited, as little as 2% is realistic, and those houses should suit the needs of the aging population. It is speculative to suggest that this development is disproportionately large when compared to the current size of the village and to the potential needs over the period of the forthcoming LDP.

22.4 Topic Paper 10 goes on to say:

In terms of housing provision, the UDP plan…set out to provide a housing requirement of 7,400 homes or 493 homes per annum. That requirement has not been met and is unlikely to be during the remaining life of the UDP…the main factors involved in not delivering the planned development do not relate to the lack of available land or a failure of policy…

The present significant quantum of available housing land, a further longer term land bank of sites, and the relatively low completions rate all Population, Household Growth and Housing LDP Topic Paper No 10 - Summary 3 serve to indicate that there is plenty of land currently available for housing development, but that owners and developers are taking a cautious approach to bringing sites forward.

22.5 The significant growth in Pen-y-ffordd needs to be managed according to need, which has not been demonstrated.

22.6 What this suggests is that while there is plenty of land available for development from the UDP, developers are bringing forward sites which offer more financial potential in villages which are commutable and therefore open up the lucrative Cheshire market. This has been evidenced in applications in Pen-y-ffordd, Higher Kinnerton, Caegwrle, Mynydd Isa and Ewloe already. These applications seek to exploit TAN1 for commercial gain without care or reference to the intention of the policy or the needs of the communities affected. This is an extract from the Flintshire County Council Spatial Plan consultation document referring to land supply:

22.7 This is evidence that land remains available within the UDP, ready to build upon. Developers will continue to ignore these evidently less lucrative sites in favour of those which offer greater return –
but that will only continue if developers are allowed to get away with it by the planning system.

**23 Settlement Boundary**

*UDP Policy HSG4 New Dwellings Outside Settlement Boundaries*

New dwellings outside settlement boundaries will only be permitted where it is essential to house a farm or forestry worker who must live at or very close to their place of work and not in a nearby dwelling or settlement.

23.1 The land is outside the settlement boundary, it was not considered under the UDP. The UDP remains the current policy, therefore the settlement boundary remains valid – as was demonstrated in the Barry case in the Vale of Glamorgan.

The current settlement boundary with the White Lion and Groves sits in brown and the Redrow application site in red, outside the settlement boundary.
24 Settlement Size – Overdevelopment

24.1 Andrew Farrow, Chief Officer (Planning and Environment), states that Pen-y-ffordd has been overdeveloped under the UDP with an actual growth of 21% against the UDP guidance for a Category B settlement of 8-15%. Calculated today, just 12 months on, and that growth sits at 28%* and with recent planning permission granted for a further 40 homes. This is not sustainable without broader investment in and consideration of the wider infrastructure - planned growth, as intended by Planning Policy Wales.

24.2 It is notable that the context of this overdevelopment is within the UDP period where Flintshire did not deliver all the housing intended within the UDP, therefore proportionately the situation in Pen-y-ffordd is even worse.

24.3 The UDP describes settlement growth limits as guidance but that should only be exceeded with demonstrated need. This need has never been demonstrated.

24.4 Andy Roberts, Service Manager Strategy Environment Directorate at Flintshire County Council (in a recent meeting) reasonably questioned why there had been a change in attitude to development in Pen-y-ffordd. The recent, large, developments had generated a normal, but not significant, level of resistance from the Community Council and residents but the Redrow application had generated over 400 objections, local press, public meetings and a pressure group. The reason is simply that the harm has now been demonstrated – it is real – it is tangible in the lives of many villages and they are speaking out against any more damage to their community and quality of life.

24.5 *There is some disagreement about numbers. For clarity. The difference between what Flintshire County Council measure as recorded growth in Pen-y-ffordd to be and what the village believes it to be is a matter of technicality.

“growth during the UDP period was actually only 21% as all of that was planned did not materialize within the plan period, or within the settlement boundary. Also, the period for measuring growth ceased at 2015, the end date of the plan, so in effect growth is now measured from the LDP base date of 2015” Andrew Farrow by email 23 September 2016

24.6 Meadowslea development of 34 houses on the old hospital site was considered a ‘windfall’ and was outside the settlement boundary. Flintshire do not include those houses in the growth of the village for that reason. Obviously we include them in our count because we consider the occupants as villagers and their homes as part of the village.

24.7 Taylor Wimpey continue to build on the Groves estate. They had permission to build 235 houses and they intend to build 235 houses, so we count that as 235 houses. The fact that at a point of time
in 2015 they had not completed their build (and they still have not done so, there are a handful of dwellings still to be completed), does not change the reality. There will be 235 houses, the permission was granted under the UDP.

24.8 This ‘playing’ with numbers does not resonate well with the community and undermines trust in the planning system. If the baseline is reset at 2015 then the houses not built at that time, but given permission to be built, will not be included in the assessment of the settlement growth capacity under the LDP. Allied to this fact is that that last Housing and Land Survey undertaken by Flintshire was in 2014, there is no representative assessment of the true number of houses in Pen-y-ffordd today.
25 Transport

A Wales of Cohesive Communities
Locate developments so as to minimise the demand for travel, especially by private car (Section 4.7 and Chapter 8).

Ensure that all local communities – both urban and rural – have sufficient good quality housing for their needs, including affordable housing for local needs and for special needs where appropriate, in safe neighbourhoods (4.11.12 and Chapter 9).

25.1 Locate development so as to minimise the demand for travel - that would mean putting people where they need to be for work, for leisure, for medical care - to reduce their journeys. There is little employment in Pen-y-ffordd - most people travel out of the village to work or study. Most do it by car. In Flintshire County Council’s own description of the make up of the region, they describe the settlements in the east of the County, which would include Pen-y-ffordd, as commuter villages.

25.2 The bus services have been reduced and the trainline from Wrexham to Bidston (change for Liverpool) is infrequent and a mile walk from this development.

25.3 Another solution to reducing car travel is to provide housing for the elderly in the village who need fewer trips out of the community. Please recall that there is no medical facility in the village and no secondary school. The closest large employers at Hanson Cement, Airbus and Broughton Retail Park are accessible by bus but there are no continuous footpaths or cycle paths.

25.4 The ‘Other’ in this map/chart includes places all over the UK and the World. Less than a third of workers have the potential to use public transport to travel to work. [Liverpool & Manchester have 5% combined, we do not have the split].
26 Nature and the Environment

Contribute to the protection and improvement of the environment, so as to improve the quality of life, and protect local and global ecosystems. In particular, planning should seek to ensure that development does not produce irreversible harmful effects on the natural environment and support measures that allow the natural heritage to adapt to the effects of climate change.

26.1 In the fields impacted by the proposed development, the hedgerows are over 150 years old, they are deep and established with a wide variety of shrubs, flowers and tree species.

26.2 There are numerous species of nesting birds as well as migratory visitors during the year. The nesting birds include owls. There are countless other bird species as well as great crested newts, bats, hedgehogs, moles, mice and badgers.

26.3 This is the countryside.

**GEN1 States**
- the development should not have a significant adverse impact on recognised wildlife species and habitats, woodlands, other landscape features, townscapes, built heritage, features of archaeological interest, nor the general natural and historic environment;

---

1871 survey map which clearly shows the fields and hedgerows

---

**D3 - Landscaping**
**TWH1 - Development Affecting Trees and Woodlands**
**TWH2 – Protection of Hedgerows**
**WB1 - Species Protection**
**WB4 – Local Wildlife Sites of Wildlife and Geological Importance**
**WB6 – Enhancement of Nature Conservation Interests**
26.4 There is a genuine concern about relying on an environmental report commissioned on behalf of a developer who are happy to publicly complain about wildlife hampering their scheduling.

26.5 Clearly the time of year site surveys are carried out has a great influence on the species of tree and shrubs that can be identified and the shifting patterns of nesting and migrating birds and animals.

“...the ingenuity with which we continue to reshape the surface of our planet is very striking, but it's also sobering. It reminds me of just how easy it is for us to lose our connection with the natural world.

Yet it's on this connection that the future of both humanity and the natural world will depend. It's surely our responsibility to do everything within our power to create a planet that provides a home not just for us, but for all life on Earth.”

David Attenborough, Planet Earth II ep5
26.6 This current GoogleMaps view, which features the most recent developments in Penymynydd at the White Lion site, clearly shows the difference between the majority of the hedgerows enclosing the proposed development fields and those more generally found around the village. Most hedgerows are close trimmed, cut low and with fences or trees spread out along the boundary. By contrast the threatened hedgerows are full, dense, established and contain a large number of trees thereby offering more habitat for a wide variety of species.

27. Noise and Disturbance

- the development should not have a significant adverse impact on the safety and amenity of nearby residents, other users of nearby land/property, or the community in general, through increased activity, disturbance, noise, dust, vibration, hazard, or the adverse effects of pollution;

27.1 The residents adjacent to the houses particularly on Chester Road, Hazel Drive and Kent Close will be significantly affected by noise, privacy and increased activity.

27.2 Many of the houses on the adjacent housing sites are bungalows or are on lower ground, which means that they will inevitably be overlooked with resulting loss of privacy.
27.3 The village already suffers with factory noise from Hanson Cement, excessive road noise from the A550 and Chester Road, made worse due to the poor quality of the road surface. To add to the traffic volume and noise impact would be harmful.
28. Displaced Housing from Cheshire

UDP Chapter 11.17 “…avoid the over development in villages, and to protect against provision for displaced housing from Cheshire, especially in border areas around Chester. In the past such demand has led to excessive growth in some village which cannot be sustained.

28.1 In Redrow’s ‘Design and Access Statement - June 2016. The submission talks about the “wide vehicular links with the A55 and the ease of access to Manchester, Liverpool, Llandudno etc.” In Redrow’s Residential Travel Plan 2.3 Development Characteristics Page 4 it describes: “Penymynydd/Pen-y-fforodd is located within the Welsh Border Region and benefits from close proximity to the English border.”

28.2 Andrew Farrow, Chief Officer (Planning & Environment), Flintshire County Council, admits that Pen-y-fforodd has been overdeveloped under the UDP with an actual growth, with his method of calculation, of 21% against the UDP guidance of 8-15%. Calculated today, just 12 months on, and that growth sits at 28% (which includes the Meadowslea development of 34 houses which were a windfall site outside of the settlement boundary) and with recently planning permission granted for a further 40 homes not included in that calculation. This level of growth is not sustainable without broader investment and consideration of the wider infrastructure - planned growth, as required by Planning Policy Wales.

28.3 This is an extract from Cheshire West’s own housing assessment undertaken in 2010:

19. 9.12 This suggests that, in practice, the potential housing land offer for Chester is, in practice, likely to be both insufficient overall and unable to provide a range of sites suitable different sectors of the housing market, unless other sites outside the City or even outside the former Chester City Council area are deemed suitable to meet Chester’s requirements. A

28.4 The limited land available in Chester for housing development is most suited to the building of apartment buildings and because of green barrier, the closest housing developments now have to be on greenbelt or as far out as Broxton. The appeal of the Welsh border villagers is clear, they are within easy reach of Chester and can command the same house prices as Chester houses – this is why Pen-y-fforodd, Higher Kinnerton, Drury, Llay and Mynydd Isa are all threatened.
29. Housing Mix

**UDP Policy HSG9 Housing and Mix Type ‘ALL NEW HOUSING SHOULD PROVIDE AN APPROPRIATE MIX OF DWELLING SIZE AND TYPE IN ORDER TO CREATE A MIXED AND SOCIALLY INCLUSIVE COMMUNITIES.**

<table>
<thead>
<tr>
<th>114 4 bed houses with ensuite</th>
</tr>
</thead>
<tbody>
<tr>
<td>44 3 bed houses with ensuite</td>
</tr>
<tr>
<td>15 3 bed houses</td>
</tr>
<tr>
<td>17 2 bed houses</td>
</tr>
</tbody>
</table>

29.1 60% 4-bedroom with less than 10% 2-bedroom. This is clearly not an appropriate mix of dwelling sizes likely to create a mixed and socially inclusive community. Throughout Penyffordd/Penyymynydd there are bungalows but there are none on this site. These are houses clearly aimed at the executive market. Smart 4 bedroom houses with garage and ensuite – enjoying beautiful views of the Cheshire countryside.

29.2 It is significant to review the houses on the design proposal for the site in this context:
The house designs are clearly executive homes aimed at the Chester market. They breakdown as follows – this information was not included in the proposal other than on the site map:

- **Detached**
  - Cambridge: 4 bed ensuite, 19
  - Oxford: 4 bed ensuite, 21
  - Winsford: 4 bed ensuite, 20
  - Shaftsbury: 4 bed ensuite, 6
  - Canterbury: 4 bed ensuite, 4
  - Stratford: 4 bed ensuite, 15
  - Shrewsbury: 4 bed ensuite, 19
  - Marw: 4 bed ensuite, 10
  - Warwick: 3 bed ensuite, 20

- **Semi-Detached**
  - Ludlow: 3 bed ensuite, 24

- **Detached**
  - Amby: 3 bedroom, 5

- **Town house**
  - Stour: 3 bedroom, 8
  - Ledbury 3: 3 bedroom, 2
  - Avon: 2 bedroom, 11
  - Ledbury: 2 bedroom, 6

**A total of 114 4-Bedroom detached houses.**

29.3 Policy **HSG9** takes forward the requirement for housing developments to provide a range of housing types to meet local need. We have established that to ensure the community spirit of the community, there is an ongoing need to maintain the correct mix of housetypes, including affordable homes.
30. Affordable Housing

**UDP Policy HSG10 Affordable Housing within Settlement Boundaries** – ‘Where there is demonstrable need for affordable housing to meet local needs, the Council will take into account of this as a MATERIAL CONSIDERATION when assessing housing proposals. Where this need exists the Council will negotiate with developers to provide 30% AFFORDABLE HOUSING IN SUITABLE OR APPROPRIATE SCHEMES within settlement boundaries.

30.1 The financial impact on Redrow of gifting the affordable homes, as opposed to selling them, is of no consequence to the number of affordable homes available to the village. Equally, agreements where one or more affordable homes are ‘gifted’ to the Council in lieu of building the larger number of affordable homes does not address the need that the affordable homes policy provides for.

30.2 We need to step back again from numbers and remember why it is important. All of the policies, supported by studies and expertise, suggest that it is vital for the wellbeing of communities that there is a mixture of housing provision. There are significant social benefits.

30.3 In-migration is written into policy - enabling people to stay in a community, the young having starter homes or flats, the elderly being able to stay close to their family, young families being able to grow while staying in the village. There are health benefits in helping with elderly and other care from family members living locally. Maintaining the proportion of residents from a variety of socio-economic demographics is also implicit and this has implications for the sense of community and jobs. The working-age population is forecast to reduce and the retirement age population increase.

30.4 Developments which skew the makeup of a community in any direction is a bad. That is why the policies are there. Pen-y-ffordd has had repeated development where the developers have been allowed the minimum number of affordable homes and it is skewing the community. The youngest generation is being forced out of the village.

“Affordable housing - this means under £100,000 or under £80,000 this means more small apartment blocks maybe 4 stories high for young couples and retired people. these can be large enough for 2 child families if well designed. FCC needs to get real about this so does everyone in Britain
31. Wider Context

31.1 Nationally in the UK, there is a housing shortage. The causes associated with this are complex but for the purposes of our specific case, the balance between land available for development nationally, the rate of housebuilding and need to build on greenbelt land are all factors – as are the shortage of available homes for the growing population and the consequent rise in house prices.

31.2 Large scale developments are in the news in England particularly right now, with developments of thousands of homes proposed in numerous locations including a number of existing golf courses, active airfields and on green belt land. Most recently there is news of proposed ‘garden cities’ in the commuter belt north of London.

31.3 This chart shows the variation in house price change for the period 2007 – 2015 and clearly shows the difference between the South East of England and Flintshire, where prices are relatively static. Whatever the housing problems facing the country and the south east in particular, they do not apply to Flintshire at this time.

31.4 The Welsh national need varies across the regions and there are certainly some regions where there is a genuine housing shortfall.

31.5 If this is the UK and Welsh national picture, it is not reflective of the local Flintshire situation where there is a relatively stagnant population (2% growth) which is increasingly aging, where house prices are stagnant and economic growth limited. Developers failed to build the houses in Flintshire on sites that were proposed under the UDP and there remains a shortfall against forecasts, despite the technical lack of a 5-year housing supply.
31.6 In this context we have to consider the effects of TAN1. The borderlands of North East Wales, of Flintshire and Wrexham particularly, are in close proximity to the economic centres of Chester, Liverpool, Warrington and Manchester.

31.7 There is a desire for developers to build houses in this catchment area because they sell well and can command prices above the local market rate.

31.8 So far the TAN1 has been applied to enable planning permission on land in Mynydd Isa for 59 houses, in Ewloe for 41 houses, in Pen-y-ffordd for 40 houses and most recently in Broughton for 36 houses. There are planning applications in various stages for 365 houses in Llay, 190 houses in Pen-y-ffordd and 56 houses in Higher Kinnerton – all made possible by TAN1.

31.9 There is a longer term economic view that suggests that Flintshire and North Wales can benefit from the Northern Powerhouse with infrastructure investments in roads and rail – notably the A550 Aston Hill and the A548 Flint Bridge – this will improve access for the A55 corridor and the Flintshire coastal area and should therefore be expected to play a part in the LDP Spatial Plan.

31.10 Most significantly for Pen-y-ffordd is the Warren Hall development. We understand that the expectation is that it will be a mixed development of houses and commercial properties as part of an aerospace zone around the Broughton Airbus factory. Recent successes in the Sealand Eurofighter maintenance contract and Airbus R&D facility support this excellent plan.

31.11 These are all medium term development plans and in this wider context, there is no question that housing need and distribution is best considered properly within the LDP process.

Technical Advice Note 15: Development and Flood Risk
Part 3 - Well-being of Future Generations (Wales) Act 2015

Planning policy sites under this larger law governing Wales. This act places a duty on public bodies to carry out sustainable development. In order to achieve this, the Act has 7 well-being goals, which have been incorporated into Planning Policy in Wales. A number of these goals are contradicted and breached by this proposed development. Details of these breaches are provided below.
32. A Prosperous Wales

32.1 Under this goal new developments are required to minimise land-take, with the re-use of previously developed land being encouraged. Planning Policy Wales (PPW) section 4.9 states that previously developed land should, where possible, be used in preference to greenfield sites. This proposed development is located on a greenfield site and will result in the loss of a substantial area of existing green belt for the village.

32.2 A number of brownfield sites are currently present within the village, which do not appear to have been considered by Redrow. We feel that the development of these brownfield areas, which are located within the existing village development boundary, should be encouraged by the Council to avoid these being discounted without justification by developers.

32.3 As part of this goal new developments should play an important role in securing the provision of infrastructure to form the physical basis for sustainable communities. Instead of embracing this goal, the proposed development will place added pressure on the currently inadequate water and drainage system.

32.4 Many existing residents already receive poor water pressure and supply and flooding of the surface water drainage system is a regular sight in the centre of the village following heavy rain. The traffic increases in the village will also place further burden on the Council for maintaining the existing roads in the village. A number of roads in the village are currently in a poor state of repair, with potholes reoccurring every winter. Additional traffic on the local road network is likely to further exacerbate this problem.
33. A Resilient Wales

Ecological resilience
33.1 This goal ensures that the biodiversity and natural environment in Wales is maintained and enhanced. Section 4.6.3 of the PPW identifies a number of priorities for rural areas, which includes securing an attractive, ecologically rich and accessible countryside in which the environment and biodiversity are conserved and enhanced.

33.2 This developed goes against these principles with the loss of important habitats in the form of hedgerows, grassland and trees, to facilitate the development. This will remove valuable wildlife corridors from the village and adversely impact the local wildlife, which include owls and bats.

Social resilience
33.3 The proposed development fails on maintaining or improving social resilience. The large number of additional residents in the village will put added pressure on an already stretched healthcare provision and system provided in adjacent villages. Furthermore, additional pressure will be placed on the school system, which at present is struggling to cope, with limited spaces available in the existing village schools.

33.4 We understand that the construction of a new school has been secured by Flintshire Council on the existing Abbots Lane site. However, this is not due to be complete until 2019. It is likely that, if approved, a large majority of this development will be inhabited prior to the completion of the new school, with limited school places being available for new children entering the village.

Climate change
33.5 Key to the goal of a resilient wales is the consideration of climate change, with new developments required to manage and mitigate the consequences of climate change. This is emphasised in PPW section 4.7 which states that new developments should be located in settlements that are resilient to effects of climate change.

33.6 This proposed development includes the removal of important carbon sinks (loss of green spaces and trees), and is likely to result in increased greenhouse gas emissions as a result of the construction activities, energy requirements of new properties and additional traffic on the local road network.

33.7 PPW section 4.7 states that new developments should be located in areas which are well serviced by existing infrastructure, including water and wastewater provision. The addition of a vast area of hardstanding which in place of the existing open space which benefits from high infiltration potential, will place an added pressure on the currently poor sewerage and surface water drainage system.

33.8 Section 4.5.4 of PPW (Chapter 4, November 2016) states that Wales can expect an increased winter rainfall and frequency of intense rainfall events as a result of climate change. This is noted to increase the risk of flash flooding and pressure on sewer systems.

33.9 Given the poor state of Pen-y-ffordd's existing drainage system and objections made by Welsh Water with respect to the lack of capacity of the existing infrastructure to cope with any further large scale developments, this development demonstrates not only a fundamental breach of this goal, but also the Planning Policy Wales policy for planning for climate change.

Development in the countryside
33.10 Section 4.7.8 of the PPW states that any new development in the countryside should respect the character of the surrounding area and should be appropriate scale and design. The proposed development again fails to demonstrate compliance of this principle, with the provision of limited affordable homes, which residents in the village consider are required, in place of large detached properties which are out of the price range of many residents and first time buyers currently living in the village. The size of the development is also large in scale, particularly in comparison to the size of the existing village.
34. A Healthier Wales

34.1 This goal ensures that the physical and mental well-being of people in Wales is maximised and new developments should encourage and understand the choices and behaviours that benefit future health.

34.2 The proposed development will also place added pressure on the existing health care provision for the village. The village has no health care centre and hence the community are reliant on that provided from adjacent villages (Broughton, Buckley and Hope). These existing facilities are under existing pressure, with many practices full and appointments difficult to obtain. The addition of a further 190 residential houses in the village is likely to be unsustainable and therefore breach the Healthier Wales goal.

34.3 Additional housing and associated traffic associated with this development is likely to result in worsening noise and air quality conditions for the village. This does not appear to have been considered by Redrow for existing residents of the village, with the noise assessment focusing on the suitability of the site for new residents, ignoring the potential noise impacts on existing residents.

34.4 There is also no air quality report, which should assess the impacts on air quality as a result of additional traffic in the village post development. In addition to the two previous large scale developments in this village, this development is likely to have a cumulative effect on noise and air quality in the village, which has not been considered as part of the developer’s submission.

45.5 PPW Section 4.7 states that new developments should promote sustainable patterns of development. Section 4.7.4 also states that new developments should be consistent with minimising the need to travel and increasing accessibility by modes other than private car. Although the provision of public transport (bus and train) is noted in Redrow’s submission, this does not take into account the fact that these provisions are poor, with local residents rarely using public transport as a result. This pattern is likely to continue with new residents joining the village, with a substantial increase in private car journeys likely to occur. As noted above this will have a cumulative impact, when the other two large scale developments that have currently taken place recently in the village are considered.

45.6 Additional traffic on the local road network has the potential to not only increase issues of nuisance in the form of noise and air pollution, but also has the potential to result in an adverse impact to quality of life and harm for the community. Air quality issues have long been linked to breathing difficulties, such as asthma. Asthma UK Cymru recognises air quality and pollution from traffic as a trigger for asthma sufferers.

45.7 Public Health Wales also indicate that long-term exposure to air pollutants has been found to increase cardiovascular and respiratory disease morbidity and mortality risks. Shorter-term exposure can also trigger symptoms such as eye, nose and throat irritation, headaches and nausea. This can lead to asthma exacerbation, lung function effects, an increased dependency on medications and an increased risk of hospital admissions for cardiovascular and pulmonary conditions.

45.8 Noise pollution can also affect our health and wellbeing. The Welsh Government indicate that increases in noise can become an irritation or a distraction, interfering with conversation and other work or leisure activities and disrupt sleep. Long term exposure to heightened noise levels, particularly road traffic noise, has been linked to an increased risk of more serious health effects, such as high blood pressure.

45.9 The potential implications of increased noise and worsening air quality will ultimately put further pressure on the existing local health care system.

35. A More Equal Wales

35.1 This goal looks to respect and encourage diversity in the community and maximise opportunities for this to be developed. The principle of sustainable development is supposed to be inclusive of all in the community. However, the mix of housing proposed as part of this development is being much focused on wealthier residents, with limited provision of affordable homes and no consideration of the needs of the disabled and elderly and future generations in the village. As such, this development cannot be regarded as inclusive for all – this can also be considered as a breach of the goals for ‘A resilient Wales’ and ‘Healthier Wales’.

35.2 Section 4.6.3 of the PPW identifies a number of priorities for rural areas, which includes securing sustainable rural communities with access to affordable homes and high quality public services. The proposed development goes against both the principle and requirement for the quantity of affordable homes that should be provided by new developments, as well as disregarding the fact that the village currently does not have existing high quality public services, such as health care. No measures to improve these existing issues are presented by Redrow.

36 A Wales of Cohesive Communities

36.1 Fundamental to this goal is the aim to locate developments as to minimise the demand for travel, especially by private car. As discussed above, the proposed development does not meet this requirement when the poor public transport network and lack of businesses within walking distance are considered.

36.2 In addition to the above, this goal incorporates the need to ensure that all local communities have sufficient good quality housing for their needs, including affordable housing for local and special needs. The development proposed does not take into account the communities needs and provides only limited affordable homes and hence is again in breach of this goal.
