WHERE YOU LIVE MATTERS

Upstream Reports™ Now Reveal Environmental Health Risks To Any Neighborhood in America

SEATTLE, WA – March 21, 2017 – Upstream Research™ announced today the release of its groundbreaking environmental health information service, Upstream Reports™ (www.upstreamreports.com), and the ability to now see historic and emerging threats to air, water and soil quality for any location.

Since early 2015, Upstream has been analyzing thousands of federal, state, county and private databases, including the EPA, CDC, USGS and HHS, to unify toxic release records, reports and health risks in what may be the largest repository of environmental and population health information easily searchable by the public.

As part of the launch, any person can obtain five Upstream Reports™ for free, each with an Upstream Index™ that compares location risk across the nation. Each Report includes dozens of individual summaries for air, water and soil quality and disease rates. Upstream provides action steps and tools to better understand information, with links to advocacy groups and contact information for government officials charged with protecting their community health.

Last year the World Health Organization estimated there were 12.6 million preventable environmentally related deaths globally, including nearly 2 million children under the age of five. Despite growing research on the impacts of environment on health, it has been one of the most difficult factors to consider when choosing where to live, select a school or decide where to work.

For concerned real estate buyers, additional Upstream Reports™ can be purchased in sets of five for \$25. A portion of revenues from paid Reports are directed to nonprofits and research institutions that serve communities with extreme environmental health risk.

“Our goal is to simplify and democratize important environmental health information and to empower consumers to make more informed decisions,” said Nick Bedbury, CEO and Co-Founder of Upstream Research™. “Everyone has a right to know what is in the air they breathe, the water they drink and the soil in their neighborhood.”

About Upstream Research™

Upstream Research™ is a health information company that aggregates, analyzes, and visualizes terabytes of global, federal, state and local data for individual location in seconds. Upstream Research™

was founded in 2015 in Seattle, Washington, by a team of scientists and entrepreneurs on a mission to make health and environmental information more accessible and actionable to the public. Upstream Research™ empowers individuals and organizations to better understand relationships between environments and health where they live, work and play. Upstream Reports™ and the Upstream Index™ are products of Upstream Research™
