

# PROJECT PROFILE

The Boardwalk at Granite Park - Plano, Texas | Rmax ECOBASEci™

## Project Description

The Boardwalk at Granite Park is 28,000 square-foot of restaurant and retail space attached with patios and a boardwalk around the lake feature at Granite Park. The Boardwalk will be located adjacent to the 299-room Hilton Granite Park Hotel and Conference Center, serving a daytime population of more than 6,000 employees and tenants.

The Architect, Omniplan, used Rmax ECOBASEci™ as a part of the wall assembly because it provides continuous insulation as well as a nailable base solution for hanging cladding. ECOBASEci™ is NFPA-285 assembly tested, which is a requirement for this project.

## Rmax ECOBASEci™

ECOBASEci™ is composed with a closed-cell polyiso foam insulation with inorganic, polymer coated glass fiber mat facers bonded to 5/8" fire retardant treated plywood (FRTP).

ECOBASEci™ allows for optimum efficiency through multiple design options, ease of construction, a better building envelope and reduced energy usage.

### Why Rmax ECOBASEci™

ECOBASEci™ provides a nailable wall solution creating a surface for cladding attachments. It is installed continuously to reduce thermal bridging and meets R-value requirements with a thinner profile.

ECOBASEci™ provides a direct impact on savings throughout the life of the building and is an excellent choice for exterior commercial wall design.

#### Architect

Omniplan Architects
