Lakes Welds guarantees the highest standard of workmanship on all their projects. Welding operators are proficient in the type of welding on which they are engaged. The workmanship applied to the construction of vessels is of sufficient quality to achieve the outcomes of structural strength and watertight integrity required. Lakes Welds has years of marine vessel building experience where quality of workmanship is paramount, building to a USL code and more recently to NSCV code.

As recommended by Chris Tucker Design, Lakes Welds will be complying with **ISO – 12 217 Standard**, due to the nature of operation and vessels area of operation. (Sheltered Water).
