

Unleash the power of your Supply Chain to improve your Sustainability!

It is no longer enough for organizations to have sustainable operations and be considered a sustainability leader. The role of the Supply Chain is becoming more important as it receives increased scrutiny from the public, stakeholders and other companies.

Sustainability Reporting Standards such as the **Carbon Disclosure Project (CDP)** and **Global Reporting Initiative (GRI)** are also assigning more weight to Supply Chain performance, interaction and accountability. This is causing more companies to expand Scope 3 Emissions to include Supply Chain in yearly tracking and reporting.

CurrentState™ VendorCheck can Help

VendorCheck helps bring clarity and transparency to an organization's Supply Chain. VendorCheck performs a 'best practices gap analysis' and a 'business practices maturity analysis' on the Supply Chain of both a purchasing organization and vendors. By doing so, an in-depth understanding of the supply chain opportunities and challenges for both parties is created.

How does VendorCheck work?

The VendorCheck process could not be simpler. The VendorCheck Supply Chain Survey is distributed to the purchasing organization and vendors. The survey contains questions for the following business categories: **Energy Management, Heating & Cooling, Lighting, Water Usage, Waste & Recycling, Sustainability Practices, Carbon Management, Green Supply Chain, Business Transportation, Goods & Services, Environment and Labor Practices.**

Completed surveys are collected by the VendorCheck team and preparation of the Findings Reports begins. The following reports are created:

- **Sustainability Performance Report (Purchasing Organization)** - This report summarizes the sustainability performance in all of the business categories and provides specific Quick Wins and recommendations to improve performance.
- **Sustainability Performance Report (Vendors)** - Vendors also receive the same performance report with Quick Wins and recommendations.
- **Supply Chain Report** - The report summarizes the sustainability performance of a purchasing organization's supply chain. The report identifies the activities vendors are excelling at and the activities that are presenting the largest challenges.

Benefits of VendorCheck

VendorCheck provides many benefits for both purchasing organizations and vendors. These are some of the most important:

- Purchasing organizations can gain points on the CDP in the area of 'Supply Chain Engagement'
- Purchasing organizations can develop more effective programs to address the biggest challenges facing vendors
- Vendors can become more attractive and more competitive suppliers by meeting and exceeding minimum sustainability requirements.
