Integrated care for Medicaid expansion enrollees led to higher primary care use but not lower ED/hospital use

Hennepin Health = integrated physical + behavioral + social care

Over 3+ yrs., Hennepin Health used more primary care, ED*

- +11%
- +52%
- +/−

Primary care, mental health users had improved life quality*

* In adjusted marginal structural models of 3+ million person-months of claims data

* In comparative analyses of semi-structured interviews with 35 primary-care-using Hennepin Health enrollees

Vickery KD, Shippee ND et al. Medical Care Research & Review. 2018:
(a) Comparative claims analysis and (b) Qualitative interviews.
