

# SCHOOL DISTRICT OF ALMA CENTER-HUMBIRD-MERRILLAN

*Environmental Project Consulting Includes:*

SAMPLING

ABATEMENT PLANNING

AIR MONITORING

SAFETY DATA SHEETS

WASTE DISPOSAL

BASIC LEVEL SAFETY PLAN

PERIODIC SITE VISITS

POST ABATEMENT VERIFICATION

In 2011, CESA 10 assisted the Alma Center-Humbird-Merrillan School District with their environmental needs. CESA 10's Asbestos Management Planner worked cooperatively with the DNR and DHS on behalf of the district to reach an agreement regarding which areas of the district would need to be abated using both sampling evidence and abatement planning. The end result was a significant reduction in the abatement area, **saving the district over \$75,000!**

Once the abatement area was determined, Environmental Health and Safety consultants aided in removal of asbestos, lead, and other hazardous materials. In addition, CESA 10 continued to provide environmental compliance services to the district through our Environmental Health and Safety Program, which includes AHERA three year re-inspections, pathogen evaluation reports, fume hood testing, and continued asbestos monitoring and abatement.

*"The original abatement area at the Alma Center-Humbird-Merrillan School District seemed too large. After careful review of sampling evidence, I was able to work with the DNR and DHS to come to an agreement on a more adequate abatement area. Proper abatement planning is crucial when it comes to utilizing funding and resources for environmental projects. As a result of careful planning, the Alma Center-Humbird-Merrillan School District was able to realize more than \$75,000 in savings."*

*Lance Gregorich, CESA 10 Environmental Health and Safety Manager*
