Bluefin Tuna Prints!

Supplies you will need:

- Light/Dark Blue, Yellow, White and Black Paints (Acrylic or similar)
  *You can use other colors later if you want*
- Paper plate or other paint palette
- Newspaper (or something to put under your canvas)
- White paper or canvas
- Scissors
- Ruler or tape measure
- Black (or dark) marker
- Old (or new) sponge
- Tuna cut out from our website (and below) that is scaled to the size of your sponge: [Get it here](#)

Procedure:

1. Gather the supplies above.
2. Measure your sponge so that you know what size to print your tuna cut out.
3. Scale your tuna cut out on the computer and then print.
4. Cut out the outline of the tuna.
5. Trace the tuna onto your sponge using the black (or dark) marker.
6. Cut out the outline of the tuna on the sponge.
   a. Don’t discard the cut pieces of sponge, you can use them to make other animals, waves, coral, etc. next to your fish print later on!
7. Layer thin lines of the desired colors of paint about 1 inch apart from each other on the paper plate.
8. Dab your tuna sponge cut out on the paints so that the paint is spread over the entire fish cut out. It is okay to mix the colors, but try to layer them on the fish if possible. Go to our website and [watch our “big fish” webinar](#) to see how we do it!
9. Once your sponge is layered in paint, position it over where you would like put it on the white paper/canvas. Then put the sponge down and press firmly all over the sponge so that the paint transfers onto the paper/canvas evenly.
10. Remove the sponge and see your fish print! You can keep making more fish with this process and you can use the leftover sponge pieces to decorate the rest of the canvas.
