Training for Educators by Educators

The one-on-one support that educators need, when they need it

+ The structure that allows new competencies to be learned, recognized, and rewarded

- Programs are designed to be completed in 3 weeks and are worth 15-clock hours towards re-certification, with most eligible for college credit

- Programs are facilitated by experienced blended and personalized learning practitioners, who offer one-on-one virtual coaching that is supported by digital content focused on specific problems of practice and rigorous project-based work

- Learning progressions through programs guide educators through personalized pathways from introductory through advanced levels of knowledge and experience, meeting the instructional needs of participants

- Participants receive real-time support and can control when and what to learn, contacting facilitators via phone, email and text, and accessing digital content and learning communities 24/7

- Programs can be delivered through the same Learning Management System utilized by students, modeling how to deliver an engaging experience

The program delivery and design models student-centered instructional practices, allowing enrollees to experience what it is like to be a personalized learning student
**Program Catalog**

**Blended Series**
- Introduction to Blended Learning
- Instructional Best Practices in Blended Learning
- Creating Digital Content for Blended Learning
- Rotation Models
- The Flipped Classroom
