

Rosy-finch Feeder Counts

Feeder Site Description Datasheet

Please fill out the following datasheet once for each non-RFID feeder you are going to conduct counts at. This information will help us understand where your feeder is and allow researchers at Utah State University to get some environmental data for the surrounding area. **Please ensure your feeder is somewhere within the winter range of the Black Rosy-finch (see map below).** The shaded area shows the normal winter range, while the dashed line represents the range extent of the Black Rosy-finch. Don't worry if you do not know how to get your elevation. We can find that information with coordinates or a street address if needed. Locations of feeders on private property will never be shared. If you have concerns with sharing location information, please contact a project coordinator to discuss options.

RFID Feeders: You do not have to fill out this sheet for an RFID-enabled feeder. One has already been filled out for you.

Name: _____

Email: _____

Feeder Name * : _____

State: _____

Coordinates: _____ °N

_____ °W

Elevation: _____ feet

* If this is a public feeder, use the place's name [ie Stokes Nature Center].
If this is your personal feeder, use your last name.
