

Utah Pollinator Pursuit Project

Protecting Utah's pollinators

What Is the Project?

The Utah Pollinator Pursuit aims to learn more about the health of Utah's pollinator populations. Our amazing community scientists make this project possible by volunteering to collect data all over Utah.

Why Is It Important?

Monarch butterfly and bumble bee populations are quickly declining.

Learning more about the species is not only important to their health and the health of their habitats, but it's also crucial for our agricultural system that depends on pollinators.

For contact information and further details on the project, open your phone's camera and scan this QR code.

PROJECT GOALS

- Learn how pollinators are using habitat
- Take inventory of pollinator species in the state

GET INVOLVED

- Improve species diversity on your property
- Create monarch and pollinator waystations (milkweed and nectar flower habitat)
- Help identify pollinator resources on your property to maximize agricultural production
- Attend monarch tagging events
