

EarthQuaker Devices White Light Overdrive

Gain • Adjusts the distortion of the effect. From clean boost to heavy saturation, depending on the output of the guitar.

Weight • A multi-functional control that adjusts the lows, saturation and the overall voice of the pedal. Noon is a good starting point.

Level • Adjusts the output level, unity is about 11 O'clock.

Compression • In the “+” position, you get more crunch, more focus and slightly less output level. In the “-” position you get a more open sound with more “bite”.

The Opamp is socketed for your enjoyment so feel free to replace with any dual OpAmp for different tones. TL072, JRC4558, LM1458, NE5532 have all be used with great results.

Power with a fresh 9V battery or a regulated 2.1mm, negative center 9V DC power supply. Do not attempt to use anything higher than 9V. Using a higher voltage is not recommended.
