## Document Overview

This Project Description Document (PDD) describes the Sustainable Sandhills community planting carbon offset project located in Fayetteville, NC. The project follows the Duke Carbon Offset Initiative Protocol 2.0 and this PDD provides the information required by the protocol, including a baseline data set and an outline of the project's processes in detail. These details and the data will be referenced in validating the project site and the greenhouse gas emissions associated.

## Introduction

### Project Title

#### **Sustainable Sandhills Community Planting**

### Project Purpose & Objectives

The purpose of this project is to sequester atmospheric carbon dioxide (CO<sub>2</sub>) through afforestation at local parks in Fayetteville, NC. The project was developed by Urban Offsets, Inc., a Delaware corporation with a place of business in Greensboro, NC. This project is to serve as a pilot program and will help establish a viable business model utilizing the Duke Carbon Offset Initiative protocol standards. For this project, Urban Offsets established relationships with a Fayetteville non profit, Sustainable Sandhills, and the Cumberland County School District. Through these relationships Urban Offsets organized the logistics of purchasing, planting and maintaining urban trees on three separate school locations. The CO<sub>2</sub> sequestered through this project will be estimated using growth models for trees, shrubs and other carbon sinks outlined by the Duke Carbon Offset Initiative Urban Forestry Protocol and applied to offset the carbon footprint of two buyers as of April 2017. Additionally, the project will help identify and quantify the environmental co-benefits of the project trees, and improve forest management practices for the City of Fayetteville. Urban Offsets and the Sustainable Sandhills also intend on allowing both companies who bought offsets access to the inventory data which will create a living laboratory for both the company and the school. This project will be one of the first projects for Urban Offsets showcasing the partnership with Duke Carbon Offset Initiative and the use of their urban forestry protocol. Afterward this will also serve as one of the first projects for Urban Offsets that will be peer validated facilitated by the Offset Network, an establish an innovative carbon offsetting program.

### Type of GHG Project

This is an Afforestation Project which quantifies emissions based on annual inventory reports. The project's GHG impact will be calculated by applying peer-reviewed research to estimate the growth rates of planted and self-recruiting tree species.

# Sustainable Sandhills Community Planting

---

## Project Site

Fayetteville, NC has a population of 204,408 as of 2013<sup>1</sup>. With over 40 designated parks and 3 designated school parks Fayetteville, NC values their green spaces<sup>2</sup>. The city has a nonprofit partner, Sustainable Sandhills, to help maintain and manage community gardens. Cumberland County Schools, the City Government, and Sustainable Sandhills have developed a Green School Certification<sup>3</sup> to help keep the city green.

## Project location(s)

This project was divided between three sites in Fayetteville, NC: The Educational Resource Center, Gallberry Farms Elementary School, and Sunny Side Elementary School.

Educational Resource Center: 396 Elementary Dr, Fayetteville, NC 28301

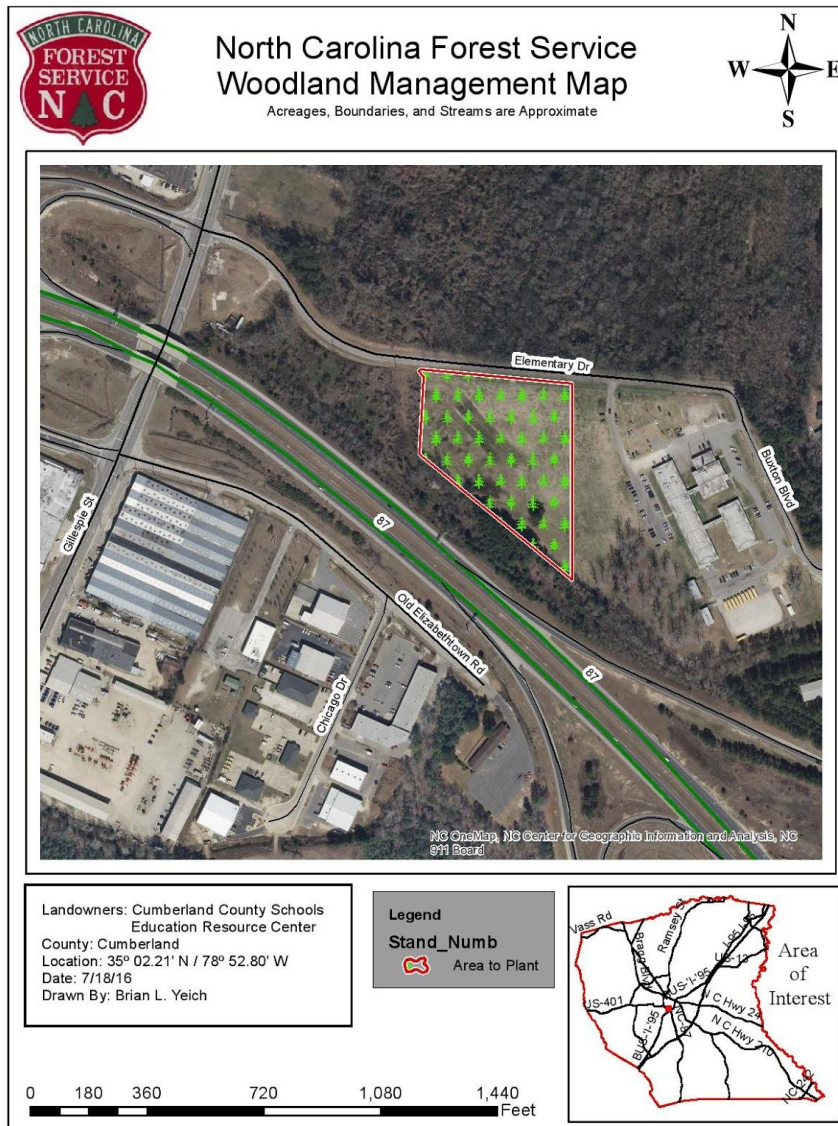

---

<sup>1</sup> <https://factfinder.census.gov/faces/tableservices/jsf/pages/productview.xhtml?src=bkmk>

# Sustainable Sandhills Community Planting

Education Resource Center located off of Elementary Road. The center serves as a hub for a multitude of activities for the Cumberland County Schools System. The tree locations are demarcated by the red outline in the image above. 1,943 trees were planted on this site.

# Sustainable Sandhills Community Planting

Gallberry Farms Elementary School: 8019 Byerly Dr, Hope Mills, NC 28348

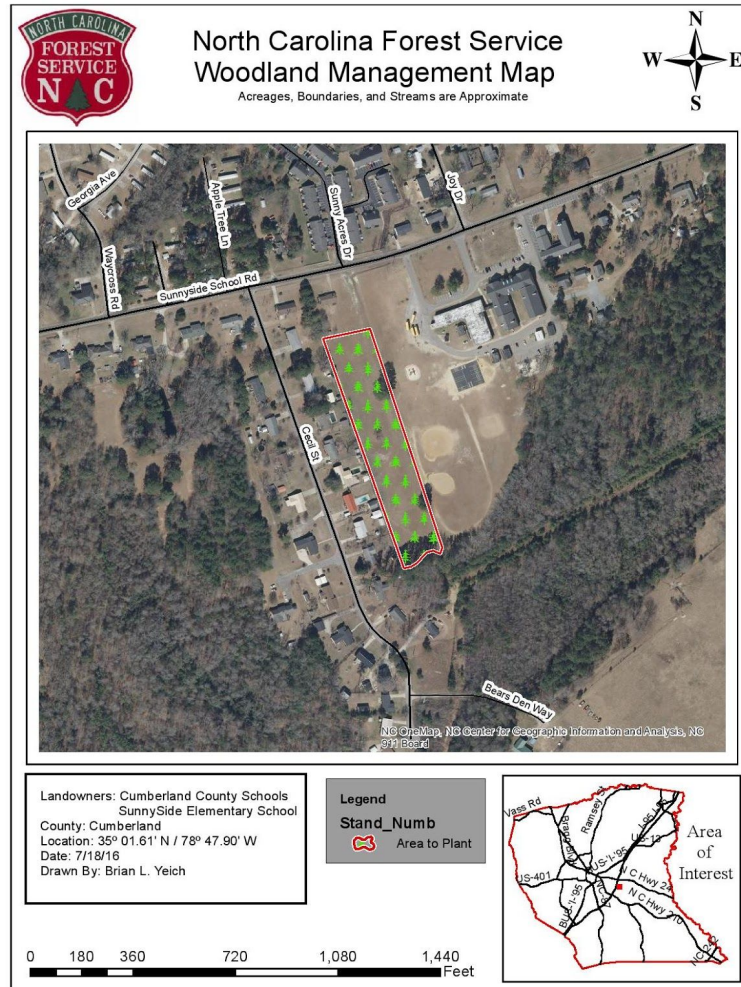

Gallberry Farms Elementary School is in the Cumberland County School district and teaches around 900 PK-5th Graders<sup>4</sup>. The tree locations are demarcated by the red outline in the image above. 1,778 trees were planted on this site.

<sup>4</sup> <https://www.publicschoolreview.com/gallberry-farm-elementary-school-profile>

# Sustainable Sandhills Community Planting

Sunnyside Elementary School: 3876 Sunnyside School Rd, Fayetteville, NC 28312

Sunnyside Elementary School is in the Cumberland County School district and teaches over 300 PK-5th Graders<sup>5</sup>. The tree locations are demarcated by the red outline in the image above. 911 trees were planted on this site.

## Site Eligibility

The project site is located within a designated urban area and has not experienced commercial harvesting of timber within the last 10 years. In addition, the site meets the Offset Network's Peer Verification local project eligibility requirements as it is both accessible to and within one day's travel for students from the purchasing university.

## Condition Prior to Project Commencement

Project Grounds have been maintained by a small group of community gardeners associated with Sustainable Sandhills, along with the school staff. Both sites are owned by the Cumberland County School District.

<sup>5</sup> <https://www.publicschoolreview.com/sunnyside-elementary-school-profile/28312>

# Sustainable Sandhills Community Planting

---

## GHG Impact

### Description of Project Impact on GHG Emissions

The GHG impact from this project will occur via the sequestration of CO<sub>2</sub> from the atmosphere by the project trees as they grow. GHG Impact is estimated using US Forest Service growth models. Initial estimates are based on tree type, with future verification estimates adding DBH and height.

### Project Technologies, Products, and Services

Saplings were planted to sequester CO<sub>2</sub> and promote native species forest growth. Digital and hardcopy inventory software was used. The total amount of annual CO<sub>2</sub> storage for all sites is estimated to be 22K tons of mtCO<sub>2</sub>e.

## GHG Assertion

### Identification of Risk to GHG impact of Project

The risks associated with this project are typical for an urban forest project. Therefore, this project uses the standard risk identification laid out by the DCOI Urban Forestry Protocol and accounts for these risks via the buffer pool. These risks are leakage and the anticipated mortality of the project trees - they are laid out below.

Per the DCOI Urban Forest Protocol:

- 1) "Leakage occurs when the maintenance burden on the UTP Maintainer increases to the point where tree health across the UTP Owner's sites (project & non-project trees) suffers, or when offset project funding causes a reduction in the baseline budget for urban forest management. Unmitigated leakage can increase the likelihood of tree mortality.
  - a) A 5% contribution to the buffer pool accounts for this burden.
  - b) Adjustments can be made to identify the impact of Leakage 10 years after project initiation. At that point, if the Leakage contribution is found to be too high, offsets can be reconciled and returned to the UTP Owner.
- 2) Anticipated Mortality
  - a) Urban foresters anticipate a 3-8% mortality rate on transplanted trees in North Carolina
  - b) In lieu of 3rd party verification, buffer pool contributions related to anticipated mortality will be a conservative 10%."

The total risk factor is 15%, which aligns closely to the ACR's urban forest risk factor of 16%

# Sustainable Sandhills Community Planting

---

## Carbon Offset Program and Protocol

Urban Offsets originally partnered with the Duke Carbon Offsets Initiative (DCOI) in 2015 to develop a way to viably and cost effectively develop Urban Forestry carbon offset projects using DCOI's urban forest protocol. Using this protocol, Urban Offsets and the DCOI piloted multiple projects in North Carolina. Soon after the initiation of these projects, Duke University partnered with Second Nature, Oberlin College, and the University of Florida to build the [offsetnetwork.org](http://offsetnetwork.org), and the DCOI led an academic committee of 10-15 institutions to create a peer review process to be used in place of 3rd party ISO-accredited verification in order to reduce verification costs and encourage innovative offset projects for educational institutions with voluntary carbon reduction goals. [Offsetnetwork.org](http://Offsetnetwork.org) acts as the hub for the peer review process developed through academic committee. Now, Urban Offsets and the DCOI are looking to use this peer review process to make their projects in North Carolina the first peer reviewed carbon offsets in the world.

Program:

Offset Network Peer Verification

Protocol:

[Duke Carbon Offset Initiative Urban Forestry Protocol v2.0](#)

Protocol Eligibility Conditions & Justification:

This project meets all of the protocol eligibility conditions outlined by the DCOI Urban Forestry Protocol 2.0.

1. Project location
  - a. Project is located within the boundary of Cumberland County, an incorporated county created under the laws of North Carolina
2. Project commencement
  - a. Project commenced on the date the trees were planted - **Thursday January 12th 2017 and Tuesday January 17th 2017**
  - b. Project commencement date was approved by the DCOI
3. Project additionality and performance standard test
  - a. Project will yield surplus emission reductions compared to a business as usual scenario - evidence and logic for additionality provided in the additionality section of this document
4. Legal requirement
  - a. The project is not the result of compliance with any federal state or local law, statute, rule regulation or ordinance.
  - b. Project will yield surplus emission reductions above and beyond legal and compliance requirements for the area
  - c. Cumberland County acknowledges this directly via their contract with UO
5. Project crediting period
  - a. The project crediting period is 20 years with option for renewal

# Sustainable Sandhills Community Planting

---

- i. The project is expected to be renewed and span two crediting periods.
6. Minimum time commitment
  - a. Project establishes a timeline of 40 years via UO's direct contract with Sustainable Sandhills and Cumberland County.

The following sections are included for reference, as the DCOI protocol only requires the information provided above.

Additional justification for reference:

## Legal

The project is not the result of compliance with any federal state or local law, statute, rule regulation or ordinance.

## Technical

Hanah Ehrenreich, the Executive Director of Sustainable Sandhills, will oversee management of the project and utilize the Fulcrum application to inventory and track the trees.

## Economic, Sectoral

No market factors pose a substantial impact to the project or the project site.

## Social

The project owner did not have previously stated goals or plans for the project site's use or development as a forest. We are aware of no social or cultural elements that might negatively impact the project's success.

## Geographic Site Specific

The project site has not experienced commercial harvesting of timber within the last 10 years. The project is within the Peer Reviewed Offset Networks' designation of local as it qualifies for one of the three definitions offered:

1) Accessible by students from one of the College or University from which Afforestation Project funds originated without requiring greater than 1 day of travel round trip to visit the project site;

2) Within the same State as the College or University;

3) Within 100 miles of the College or University Campus.

## Temporal

The start date of the project is recorded as 1/12/17 which is the date that project trees were first planted. Normally, the start date would be when the project contract was signed, but due to delays on the city/nonprofit side, UO did not receive an executed copy of the contract until 10/31/16. However, the terms were agreed upon via conversation and emails prior to the planting. All calculations of project GHG impact shall use the date of the tree planting until the present, as the timeframe for measurement of forest growth and carbon accumulation.

# Sustainable Sandhills Community Planting

---

## Roles & Responsibilities

### Internal Structure & Stakeholders

- Duke Carbon Offset Initiative
  - Established the protocol for quantifying carbon offsets from urban trees.
- Buyer 1
  - Purchased the carbon sequestered from the project trees.
- Duke University:
  - Through a matching fund, Duke University purchased additional carbon offsets and project trees to support the other buyer's initiatives.
- Urban Offsets:
  - Project developer and manager - facilitated communication and implemented the project based on the Duke Carbon Offset Initiative's Protocol.
- Cumberland County, NC:
  - The County acted as the land owner and coordinated the purchase and shipping of project trees.
- Sustainable Sandhills:
  - Sustainable Sandhills helped determine the species and the landscaping of the project trees.
- The Offset Network:
  - The Network helped facilitate the peer validation of the project site.

### Transfer of ownership via contractual agreements (i.e. chain of custody):

Through the contracts established by Urban Offsets, and both buyers will receive portions of the total carbon credits from these project trees. By selling the carbon credits, Urban Offsets is able to pay Sustainable Sandhills for the trees successfully planted through the project. The university and company are able to reduce their GHG emissions while the county and local non-profit are able to reforest local parks. The specific chain of custody for the carbon offsets is outlined below:

1. Cumberland County Schools owns the land, the trees, and the original right to the carbon
  - a. Sustainable Sandhills helps plant and maintain the trees in partnership with Cumberland County.
2. Cumberland County Schools transfers the right to the carbon from planted project trees to Urban Offsets in exchange for payment and additional resources (inventory application, etc.)
3. Upon peer verification, Urban Offsets will transfer the right to the carbon from the planted project trees to the purchasers per the corresponding contracts.

## Environmental Impact Assessment

Trees will be planted under the guidance of expert arborists in areas of need. There is no expected negative environmental impact.

# Sustainable Sandhills Community Planting

---

## Chronological Project Plan

Project Commencement Date: 2016

Project Termination Date: 2056

<b>Date</b>	<b>Task</b>	<b>Status</b>
Summer 2016	Project Created: Elon University established an offset project with Urban Offsets.	Complete
Fall 2016	Planting location found: Urban Offsets coordinated with both the City of Greensboro & Greensboro Beautiful to determine the appropriate planting sites.	Complete
January 2017	Site prepared for planting: The City crew and Greensboro Beautiful determined the tree species and shipping logistics for the project trees at the Price Park location.	Complete
February 2017	Planting event: Elon volunteers, Urban Offsets, The City of Greensboro and Greensboro Beautiful organized the first tree planting event.	Complete
March 2017	1st inventory completed: Judson Clinton, the Greensboro City Arborist conducted the inventory for the project trees in Price Park.	Complete
Summer 2017	Site prepared for planting: The City crew and Greensboro Beautiful determined the tree species and shipping logistics for the project trees at the Price Park location.	Complete
December 2017	Planting event: Elon volunteers, Urban Offsets, The City of Greensboro and Greensboro Beautiful organized the final tree planting event.	Complete
Winter, 2018	2nd inventory completed: Judson Clinton, the Greensboro City Arborist conducted the inventory for the project trees along the Greensboro Greenway.	Complete
Winter, 2018	The Offset Network will coordinate a peer validation event for the Price Park location.	Current
Fall, 2018	The Offset Network will coordinate a peer validation event for the Price Park location.	TBD
Annual	Project inventory, data input, and offset accounting	On-going
2018; every 5th year thereafter	Initial Project Verification and subsequent verifications at 5-year intervals	On-going

## Project Boundaries & SSR List

The physical project boundary is the Cumberland County, North Carolina. The additionality section below analyzes the Sustainable Sandhills' tree planting activities to determine if this project's trees go beyond business as usual.

# Sustainable Sandhills Community Planting

---

The GHG boundaries for the project are listed below:

- Project Sinks and Reservoirs:
  - Standard tree plantings (Sustainable Sandhills' planting program)
    - These emissions are sequestered in both the baseline scenario and the project scenario. Therefore, while they are included, they are not measured or calculated as they occur equally in either scenario. This is also protected via the contract between the school district and Urban Offsets.
  - Project trees
    - These emissions are calculated using the tree species, height and DBH.
      - These are included and are the main source of sequestration.
  - Phoenix and Tempe AZ tree plantings.
    - These emissions are calculated using the tree species, height and DBH.
      - A portion of these trees are included only as a buffer pool for the project.
- Project Sources
  - Vehicle emissions for planting and maintenance
    - Excluded:
      - These emissions are negligible and below the *de minimis* threshold as stated in the DCOI Urban Forestry Protocol.

## Determination of Baseline Scenario

This project follows the DCOI Urban Forestry Protocol requirements for a baseline scenario and additionality which are presented in the “Protocol Eligibility Conditions & Justification” and “project additionality” section of this document. Through the questions listed in these sections, the baseline is determined to be business as usual, also defined as the city/nonprofit planting a similar amount of trees every year proportional to their funding. This project, via discussions, data, and legally binding contracts, provides additional funding to be used only for tree plantings and maintenance which allows the city/nonprofit to plant additional trees. For additionality requirements please refer to the “Project Scenario Additionality Section”, as this section aligns directly with the DCOI Urban Forestry Protocol being used.

### Product or Service Created by Project Activity

This project provides the necessary monetary resources for planting trees and maintaining trees.

### Geographic Area & Temporal Range

The physical areas are the areas shown in the Project Site section of this document. The temporal range is from 2017, when the first trees were initially planted, to 40 years in the future based on project contracts with the local government and nonprofit partners.

# Sustainable Sandhills Community Planting

---

## Additional Criteria

N/A

## Baseline Candidate

Standard planting - Trees are planted by the city/nonprofit in proportion to their funding. This is a relatively stable amount that does not change unless funding changes.  
Project scenario - This project, via discussions, data, and legally binding contracts, provides additional funding to be used only for tree plantings and maintenance which allows the city/nonprofit to plant additional trees.

## Barrier's Test Results

Standard planting - No barriers

Project scenario - Large economic barrier, as trees can only be planted and maintained with proper funding. Social barrier, none. Political barrier, none.

Overall – project scenario faces large barrier due to limited resources. For a more detailed analysis, see section “Project Scenario Additionality Section” below.

## Baseline Scenario Solution

Standard planting is accepted as the baseline scenario.

## Project Scenario Additionality

This project applies a national baseline and couples it with the protocol's additionality checklist to show clear additionality:

- Do you have historical data for the number of trees planted in the past 5 years?
  - No, this data was difficult to acquire. Instead, UO requires the City to sign a contract that states explicitly that A) all \$ from the program must go directly to tree plantings and maintenance, thereby directly increasing planting/maintenance resources, B) the City will not change their level or pursuit of tree funds, and C) the City is not legally required to plant additional trees.
- Are you or your organization bound by law, regulation, statute, or court order to plant trees in the same manner this project does?
  - No, the Cumberland County Schools and state of NC do not have any laws, regulations, statutes, or court orders that require the planting of trees.
  - Cumberland County Schools has acknowledged this directly in their contract with UO.
- Do implementation barriers exist that limit the ability of the Cumberland County Schools to plant trees?

## Sustainable Sandhills Community Planting

---

- Yes, funding barriers and staffing barriers exist that prevent expansion of planting programs.
- Cumberland County Schools & Sustainable Sandhills has acknowledged this directly via communications and in their contract with UO.
- Are these plantings above the business as usual scenario?
  - UO requires that all \$ provided by the program go directly to tree planting and maintenance.
  - Via their contract with UO, Sustainable Sandhills agrees that receiving these \$ will not alter their current level or pursuit of tree funding and other resources.
- Is there a legal contract that minimizes leakage?
  - Yes, via their contract with UO, the Sustainable Sandhills agrees that receiving these \$ will not alter their current level or pursuit of tree funding and other resources.

The items above, in conjunction with an overall declining national baseline, show that the project actions result in a scenario that goes above and beyond business as usual and that these trees would not have been planted under a business as usual scenario.

### Baseline Scenario and Project Scenario SSR

For this project, the SSR are the same for both the identified baseline scenario and the project scenario. They are as follows:

The GHG boundaries for the project are listed below:

- Standard tree plantings
  - These emissions are sequestered in both the baseline scenario and the project scenario. Therefore, while they are included, they are not measured or calculated as they occur equally in either scenario. This is also protected via the contract between Cumberland County Schools and Urban Offsets.
- Project Sinks and Reservoirs
  - Project trees
    - These emissions are calculated using the tree species, height and DBH.
      - These are included and are the main source of sequestration.
  - Phoenix and Tempe AZ tree plantings.
    - These emissions are calculated using the tree species, height and DBH.
      - A portion of these trees are included only as a buffer pool for the project.
- Project Sources
  - Vehicle emissions for planting and maintenance
    - Excluded,

# Sustainable Sandhills Community Planting

---

- These emissions would likely occur under a business as usual since the Sustainable Sandhills has to maintain trees within the same area as the planted trees;  
And, these emissions are negligible.

This project will monitor the included sinks - carbon sequestered via project trees and Sustainable Sandhills trees.

## Risk Assessment & Future Consideration

### Double Counting

All carbon offsets produced by the project will be registered with the Urban Offsets Registry. Each carbon offset will receive a unique identification number. The registry will track the chain of custody to ensure that offsets are not double counted, and retired immediately after their use. The chain of custody is determined via the legally binding contracts the project has with the city/nonprofit.

### Leakage

This project includes the requirement that county sign a legally binding contract that they will not change their current efforts and approach to acquiring funding for planting trees. This mitigates the risk of project funding leading to a reduction in baseline funding, which, in turn, would impact trees planted.

### Project Permanence

This project uses the DCOI protocol's standard 40 year timeline for permanence. To reduce risk, the Sustainable Sandhills has agreed via legal contract to replace any trees that die in the program within 1 year of that tree's death with a similar tree at least 1" caliper in diameter. While increased mortality rates could result in short term reversals that are not accounted for via the buffer pool, long term permanence is assured.

### Total Risk Factor

This project uses the standard risk factor established by the DCOI Urban Forest Protocol. This risk factor is 15%- 5% for leakage and 10% for tree mortality.

### Additional Risks

N/A

### Buffer Pool Designation & Total Project Risk Factor

To reduce risk, this project also uses the DCOI protocol's standard 15% buffer pool. This buffer pool is provided by projects in North Carolina and Arizona.

# Sustainable Sandhills Community Planting

---

## Project Impact Calculation

Global Warming Potential Used:

Only metric tons of CO<sub>2</sub> are used to calculate offsets for this project. Urban Offsets' used carbon sequestration and tree growth values produced by the USFS carbon calculator<sup>6</sup> (#'s gathered in 2016/2017), this calculator has been updated since we ran the numbers.

Baseline Scenario Total Atmospheric GHG Impacts:

X carbon offsets. X = the amount of carbon sequestered by standard tree plantings. X does not need to be calculated as it occurs both for the baseline scenario and the project scenario and cancels out within the GHG assertion.

Project Scenario Total Atmospheric GHG Impacts:

X carbon offsets + offsets from trees planted via project

GHG Assertion:

Total project carbon offsets = (Project scenario (X carbon offsets + offsets from project trees) - Baseline scenario (X carbon offsets)) \* (1 - 0.15) = Offsets from project trees \* 0.85

Calculation procedure and project offsets:

Per the DCOI protocol, all calculations will use the US Forest Service carbon calculator along with tree species, DBH, and height to total calculate carbon sequestered. This projected data will be made available to all partners. After peer validation this information will be made public with actual measured data points.

Currently, the project has planted 4,632 project trees of varying species, including:

Species	Tree Count	Site
Pinus taeda "Loblolly Pine"	3,721	Educational Resource Center & Gallberry Farms Elementary
Pinus palustris "Longleaf Pine"	911	Sunnyside Elementary

Input data - tree species, DBH, height ⇒ US Forest Service carbon calculator ⇒ estimate total carbon stored by the tree.

Based on US Forest Service estimates, Loblolly Pines planted in this region are expected to produce approximately 5.5 carbon offsets per tree over 40 years, and Longleaf Pines will produce approximately 2.4 carbon offsets per tree over 40 years. Altogether, with 3,721 Loblolly and 911 Longleaf, this project is projected to produce a

---

<sup>6</sup> <https://www.fs.usda.gov/ccrc/tools/tree-carbon-calculator-ctcc>

# Sustainable Sandhills Community Planting

---

total of 22,652 carbon offsets by maturity. 3,398 carbon offsets will be placed in a buffer pool as required by the DCOI protocol.

These offsets will be distributed in the following manner:

- Buyer 1 - 90 Verified Emission Reductions (VERs)
- Duke University - 333 VERs

These offset will be calculated according to the project timeline by using the height and DBH to estimate carbon offset sequestration via US Forest Service estimates.

## Project Implementation

The goal of this project is to ensure the survivability and health of the trees planted. The following sections provide an overview of how the project is managed.

Project Management:

Hanah Ehrenreich, Executive Director of Sustainable Sandhills, will oversee management of the project and utilize the Fulcrum application to inventory and track the trees.

Urban Offsets will support Hanah Ehrenreich and project stakeholders by providing technological support, calculating the offsets from the project, helping coordinate future peer review verification events, registering the offsets with the Urban Offsets Registry, and ensuring the offsets are transferred to the purchasers.

## Project Monitoring Plan

Cumberland County Schools and Sustainable Sandhills will maintain the project trees. In order to ensure that the trees have been planted, the City/Nonprofit is required to use the Fulcrum app to record the GPS coordinates and species of each project tree within three months of planting. The City/Nonprofit is then required to use the same app to inventory the trees according to the project timeline below. For each inventory, the app operator must note the tree's height, the diameter at breast height (DBH), and tree species following standard practices. Photo documentation is optional.

All data will be submitted to UO and UO will house these data in a secure database that is accessible, upon request, by project partners.

UO will work with the DCOI and the Offset Network to organize a peer validation event within the first year and every fifth year following the initial inventory. The peer validator will have access and will update the fulcrum app in a similar fashion. After the first validation event, peer validation will occur every five years. The Project's progress is made public on UO's [registry platform](#), and this PDD as well as subsequent validation and verification reports will be available at [offsetnetwork.org](http://offsetnetwork.org).

Sustainable Sandhills is to ensure that at least 85% of the trees survive. If more than 15% of the trees die, the City of Greensboro is to present a replacement plan resulting in an equal amount of sequestration.

# Sustainable Sandhills Community Planting

---

## Project Baseline Monitoring Schedule

<b>Project Timeline</b>	<b>Monitoring Event Type</b>	<b>Data Collected</b>
Start Date – once completed:	Stratification	Biomass stratification; if trees planted: species, DBH, height, estimated age, (GPS coordinates)
12 months After Planting	Peer Validation	Validation of project methods, quantifying sequestered C02 & validating maintenance methods
Years 1-4	Full inventory	An annual representative sampling: Species, DBH, height, estimated age, (GPS coordinates)
Year 5	Full inventory	Representative sampling: Species, DBH, height, estimated age, (GPS coordinates)
Year 5	Peer verification	Validation of project methods, quantifying sequestered C02 & validating maintenance methods
Year 6-10	Full inventory	An annual representative sampling: Species, DBH, height, estimated age, (GPS coordinates)
Years 10	Peer verification	Validation of project methods, quantifying sequestered C02 & validating maintenance methods
Year 11-15	Full inventory	An annual representative sampling: Species, DBH, height, estimated age, (GPS coordinates)
Years 15	Peer verification	Validation of project methods, quantifying sequestered C02 & validating maintenance methods
Year 16-20	Full inventory	An annual representative sampling: Species, DBH, height, estimated age, (GPS coordinates)
Year 20	Full inventory Recalculation of baseline scenario	Representative sampling: Species, DBH, height, estimated age, (GPS coordinates). Pertinent laws, common practice and other information to determine baseline suitability.
Years 20	Peer verification	Validation of project methods, quantifying sequestered C02 & validating maintenance methods
Year 21-25	Full inventory	An annual representative sampling: Species, DBH, height, estimated age, (GPS coordinates)
Year 25	Peer verification	Validation of project methods, quantifying sequestered C02 & validating maintenance methods

# Sustainable Sandhills Community Planting

---

Year 26-30	Full inventory	An annual representative sampling: Species, DBH, height, estimated age, (GPS coordinates)
Years 30	Peer verification	Validation of project methods, quantifying sequestered CO2 & validating maintenance methods
Year 31-35	Full inventory	An annual representative sampling: Species, DBH, height, estimated age, (GPS coordinates)
Years 35	Peer verification	Validation of project methods, quantifying sequestered CO2 & validating maintenance methods
Year 36-40	Full inventory	An annual representative sampling: Species, DBH, height, estimated age, (GPS coordinates)
Year 40	Peer verification	Validation of project methods, quantifying sequestered CO2 & validating maintenance methods

## Verification

Per the DCOI protocol, all calculations will use the US Forest Service carbon estimates along with tree species, DBH, and height to calculate carbon sequestered.

Verification of the project and carbon offset calculations will be carried out through the Peer Reviewed Network and the Offset Network. They will enlist an institution considered a peer to the offset purchasers to act as the validator/verifier. The peer validator will have forestry experience but will not have a certification or license. The Offset Network, Peer Review Network, and the Duke Carbon Offsets Initiative are collectively still reviewing and editing the guidelines for peer validation. This project will serve as a pilot for the peer review process.
