

A Scientifically Supported Explanation of the Pharmacodynamic Characteristic of Biocence' "Selective, Antimicrobial Microbiocidal" Efficacy

Dr. T. Chapman, MD.

We have "played and danced" with the MOA (Method of Action) of **Biocence** or the **BBC** (*Biocence Botanical Complex*) for some time and it has been explained by exclusion of "non-applicable supposition and subatomic mechanics." However, with further discovery and quantum mechanical time applications, I think I would purpose this highly possible MOA (Method of Action) of the "**Selective, Microbiocidal**" activity of the BBC in this way:

1). What science is now uncovering (not discovering since God's Creation has been existence from the getgo) is that these facts are now structured in the archives of verifiable scientific factual truths.

2). There are over 50,000+ chemical reactions occurring in and in each and every cell in the human body *per second*.

3). The chemical time of these reactions is in *femtoseconds*, ie: *a femtosecond is to a second, as a second is to 31.7 million years!!*

4). What has been previously observed in "animate or living tissue/cells" is the almost inestimable amount of time needed to "shutdown" the energy systematics of a cell, albeit microbial, by inhibiting the electron transfer across the mitochondrial membranes (2), thereby creating a "negative reserve" of ATP, causing an infinitely-rapid, cellular demise. This phenomenal "eradication speed" is synonymous with the MOR (mortal oscillatory rate) of "inanimate" particles.

5). The average speed of a metabolic chemical reaction is 15 FS or 15×10^{-15} seconds. Not even high-speed electron microscopy can record this speed. And that was experienced in the laboratory of a BSL 4 laboratory in Texas in 2002-5 with Director Dr. John P. Heggers, PhD and Select Agent User with the DOJ.

One of the mysterious conundrums that is often parlayed with, chemically superimposed into and onto the bio-mechanics of the **Biocence** accolade, '**Biocence**

is a "*Selective Antimicrobial*" drug' is the continual observance that **Biocence** does not eradicate "healthy and beneficial" microbial agents, ie: bacteria, viruses or fungal agents. To reiterate a statement credited to the genius, quantum physicist, Nikola Tesla: "*If you wish to understand the mysteries of the universe, think of energy, frequency and vibration.*" Over the eons of time, the genomics of "healthy life" established a genomic "footprint" that has remained through the ages; and only with epigenomic, modulatory efforts or the "*Dance of Life*," are the piano keys of our unchanging genomic constitution altered; not changed, but altered to up or down-regulate hundreds of thousands of peptide moieties, often from the same genetic locus; ultimately determining thoughts, actions and physical and metabolic behavior in all organ system' tissue and their cellular components. The study of *Energy* or *Vibrational Medicine* elucidates the variations of energy frequencies and their electronic oscillatory movements, predicated on the confluence or discordance of the electron movements, ie: differentiation of healthy, disease-free life or unhealthy, infected and diseased life. To create a "plausible axiomatic statement" of **Biocence'** action as observed in microscopic, *in vitro* observance and the *in vivo*, *empirically-collected evidence* to date, one could state that the "synchronous, vibrational frequencies of the galenical components of the **Biocence Botanical Complex**" create an electron, oscillatory or vibrational field that is harmonious and concordant with the ageless, subatomic frequencies of healthy, cellular genomics; but they are discordant to unhealthy, diseased genomic frequencies, creating an MOR, or "Mortal Oscillatory Rate" that causes a cellular disruption that occurs in *femtoseconds*. The collusion of quantum mechanics, electron movement and the essentiality of energy flow and the study of Energy Medicine all support, albeit without finality, the MOA of the **Biocence Technology's Biocence Botanical Complex** as being one of a "**Tesloid**" euphemism: "*The Antimicrobial Effectiveness of Biocence is determined by the concordant or discordant response of a microbe's energy signature when exposed to the energy frequency of the Biocence Botanical Complex.*"
